

Amendment No.1

Request for Quotation (RFQ) for the Provision of provision of Metalwork and carpentry workshops Tool kits support projects in Tartus, Banias and Al-Qadmus Ref. UNDP-SYR-RFQ-037-17

This Amendment has been raised to answer clarifications raised by suppliers:

Q1). Lot 1, item 8; Toothed chisel, with pointed head. Given that the lot is for metal work, do you mean a center punch (pointed tip)? As a toothed chisel, also called a scutch holding chisel, is used in masonry (brick) work.

If it is a center punch that is required, 30cm is a very unusual size, center punches are usually 10-15cm long.

A). **No its 30 cm not 10-15 cm**

Q1). Lot 2, item 2; 1kg hammer. The normal hammer that would be used in a carpentry tool kit is a claw hammer such as the below illustration. These normally weigh between 225 – 560 g. a 1kg hammer would be a club hammer, which is not usually used in carpentry. Please clarify which you would prefer us to quote for.

A). **For this is ok to have 225-560g**
