Section 5a: Schedule of Requirements and Technical Specifications/Bill of Quantities

A. Background Information

1. General Overview:

The **Objective** of the UNDP/MIA Project is to contribute to the enhancement of the operational and functional framework of MIA for the efficient, transparent and inclusive implementation of the sector reform agenda in the areas of public order, civil protection, border security, migration and asylum in compliance with the national priorities and international commitments improving the effectiveness in designing and implementation of sectoral policies and services addressing the needs of men and women in Moldova. The actions of the project will facilitate the creation of the viable gender sensitive nationwide mechanism ensuring an appropriate preparedness of state authorities to respond to events that pose a direct threat to public order and national security through a coordinated interaction.

The expected **outcome** of the Project is to enhance the MIA and its sub-divisions capacities, equip them with instruments and tools to implement the sector reform agenda in line with the national priorities and international commitments improving the effectiveness in designing and implementation of policies addressing the needs of men and women in the Republic of Moldova.

2. Specific Context:

An analysis of the Ministry of Internal Affairs of the Republic of Moldova (MIA) over the past years showed an alarming situation especially regarding death rates among youth, caused by drowning in the aquatic areas of the country. According to the statistical data provided by MIA, the average trend on the annual number of drownings keeps rising during the last years.

A detailed analysis of drowning cases disaggregated by gender and age, shows that during the past two years, along with the overall ascending trend in the total number of drownings, a dramatical increase of drownings among females and minors was recorded. Thus, in **2015** there have been registered 144 cases, including 4 females and 14 minors, while in **2016** – their number increased to 185 cases, including 29 females and 23 minors. During the first six months of the **2017**, there drowned 8 females and 12 minors. According to recent global studies, Moldova ranks 44th out of 172 globally evaluated countries on cases of drowning.⁵

The situation is partially due to the **lack of an adequate policy and normative framework** on preventing drowning, of the preventive mechanisms, such as teaching swimming at schools or comprehensive awareness raising, and also there is no appropriate training facilities for rescuers and divers.

To address the issue of human security in general and of high incidence of human drownings, UNDP in partnership with the MIA, launched the project “**Strengthening capacities of the Ministry of Internal Affairs and its subdivisions for the effective implementation of the sector reform agenda**”. One of the components of the project aims at the establishment of a Training facility for rescues and divers by the refurbishment of the existing swimming training facility “Central Dinamo Sport Club” that belongs to the Ministry of Internal Affairs. The immediate task of the project is to reconstruct the MIA Dinamo Swimming Centre designated for life skills training for Specialized Public Institutions’ staff, as well as for the population in the vicinity. Additionally, the reconstructed swimming infrastructure must be able to host national swimming competition, accordingly to the International Swimming Federation (FINA) standards. The upgraded facility will offer better conditions for effective training courses and drowning cases simulation: first aid and rescue. It also will promote the swimming related sport activities. Besides enhancing MIA’s capacity, this activity will include clear benefits for youth, men and women belonging to vulnerable groups.

The modernization of the Dinamo Swimming Centre includes the reconstruction with the application of modern technologies including the change of the filtration and treatment system. According to the modernization concept, it is proposed to repair the swimming pool using modern materials - stainless steel alloys (with the application of a waterproofing membrane), placed on a structure of metallic shells on the reinforced concrete walls of the pool. At the

same time according to the conclusions and recommendations of the Technical Expert Report nr. 297-07-17/T of 22.08.2017, it is necessary to carry out some reinforcement of the technical basement. Along with the mentioned technical expertise, the UNDP Project has developed the detailed technical documentation and BoQ for the reconstruction of the Dinamo Swimming infrastructure (Annex 1 and 2).
