

Responses/Clarifications to Bidder Questions

BBRFP49702: Consultancy Services to Design, Build, Pilot and Install a Web Based Integrated Crime Management Information System Strengthening Evidenced Based Decision Making for Citizen Security in the Caribbean (CARISECURE)

#	Page	RFP Section	Relevant Text	Question / Comments	Response
1.		General		RFP documents also include "System Specification for a Web-Based Integrated Crime and Justice Information Management System". This documents indicates development of systems like Police Records and Management Information System; The DPP office and Police Prosecutors Case management System; The Courts Case Management Systems; Prison Records and Management Information System; Probation Case Management System. System specification document mentioned above, is the functional requirement of System to be developed? Is development of all systems mentioned above and requirements to be developed/implemented under current scope? And if not what are the functional requirements of	The Awarded Company will have to develop these application: Police Information Management System, The DPP and Procurement Case Management System, the Courts Case Management System and Prison Management System. The application connect all systems and should be as generic as possible as it will be considered for Guyana, St. Kitts and Nevis and St. Lucia but with the option of providing this solution to other Caribbean countries .
2.		General		As we understand from pre-bid response that there will be some country wise variations in the system. Is there a visibility on areas and what level of variations are expected.	As for now, the application should be as much as possible flexible so minor adjustment might be required to respect national laws. The geo-mapping application will be specific to the country
