SECTION 5A: SCHEDULE OF REQUIREMENTS AND TECHNICAL SPECIFICATIONS/BILL OF QUANTITIES

Construction of External Power Supply to Pumping Stations on Daryelik Arna Canal in Yangibazar and Urgench districts of Khorezm region

Daryelik Arna canal is designed to irrigation of the farmers' lands in Yangibazar and Urgench districts. However, due to a long length of the irrigation system (canal length is more than 40 km), and a heavy deterioration of power lines and transformer substations, it is not possible to supply water to the farmers' lands located at the end of a waterway. Additionally, local connecting to the power delivery system contributes to unauthorised withdrawal of water to the farmers without regard to a water allocation plan and aggravates conditions of water flow control in canal.

Therefore, this project is devised to improve of water supply control from the canal and create a single power delivery system.

General

10 kV high-voltage electric transmission line (HVLEP) passes through the territory of Urgench and Yangibazar districts of Khorezm region. Construction site is located at a height of 97 m above sea level, mean air temperature is 38°C, precipitation is 107 mm per year. Seismicity of the area is 7. Passage along power-line is possible throughout the year. Basic materials for supports, hardware and equipment are delivered by the mechanical transport. Potable water for builders is supplied from the local sources.

All construction-installation and special works shall be executed in strict adherence to the design arrangements.

Electrical solutions

In terms of power supply reliability, the consumer belongs to Category III. kV 110/10 kW Ozodlik SHH-10 Substation is accepted as a terminal point with installation of 10 kW Outdoor Switchgear (OS). At connection of the existing pumping stations to the newly built overhead line (OHL)-10 kW, in some places where composite load is connected to feeding PTS, an installation of the new Packaged Transformer Substation (PTS)-10/0.4 kW with 160 kVA power transformer and disconnecting device of LISO (line isolating switch outdoor)-10 type shall be provided.

At construction of OHL-10 kV, suspension shall be provided: in bulk power supply - non-insulated wire AS (aluminium and steel)-70, on branches AS-50 and AS-35 across power-line on reinforced concrete poles SV110-3.5 as per standard series 3.407.1-143 (publication 2). At crossings, TS-1 (cross-arm) adapters shall be installed on supports.

In accordance with a total power requirement, provision is made for installation of additional package transformer substations of PTS (package transformer station) -10/0.4 type with 250 kVA transformers - 1 pc, 160 kVA - 3 pcs, 100 kVA - 2 pcs. For separation of combined load from pump load, there are PTS-10/0.4 with 40 kVA transformers - 1 pc, 25 kVA- 1 pc.

At OHL-10 kV, concrete supports shall be installed in the bored foundation ditches. Foundation ditches for concrete supports shall be bored by the boring machine. Supports shall be laid out and assembled by the crane. Unrolling of AS (aluminium steel wire)-50 conductors shall be made by the tractor from pay-out trolleys on concrete supports for OHL-10 kV.

Performance of any, even short-time works, with application of the motor vehicles and lifting cranes immediately under HVLEP without its disconnection during works shall be prohibited. All works on disconnection of OHL-10 kV and PTS-10/0.4 kV from the operating line shall be done by the Yangibazar District Energy Provider.

Earthing

Total dissipation resistance of an electric current of OHL ground-wires at any time of the year shall be not more than 10 Ohm. Earthing arrangement for supports and equipment shall be as per generic design of 3.407-150 standard series. Earth resistance transformer of the substation shall be not more than 4 Ohm.
