TERMS OF REFERENCE (TOR) FOR CONDUCTING LANDSCAPE BASED SOUM DEVELOPMENT PLANNING

Project Title: Ensuring Sustainability and Resilience (ENSURE) of Green Landscapes in Mongolia

Type of position: Conducting landscape-based Soum development planning

Type of contract: Service contract for a team of multi-disciplinary experts

Duty location: Ulaanbaatar and expected to travel to 4 project pilot landscapes. Please note that commencement and completion of the pilot landscapes for Khangai region and Gobi region will have to go simultaneously (See table 1 and 2).

Duration of contract: 10 months

1. Project Description

The objective of the “Ensuring Sustainability and Resilience (ENSURE) of Green Landscapes in Mongolia” project is to enhance ecosystem services in multiple landscapes of the Sayan and Khangai mountains and southern Gobi by reducing rangeland and forest degradation and conserving biodiversity through sustainable livelihoods. The project area covers 13 soums of Arkhangai, Zavkhan, Bayankhongor and Gobi-Altai aimags.

The project strategy will be to engage multiple stakeholders to deliver four project outcomes, as follows:

- 1) Enhanced enabling framework and systemic tools help conserve biodiversity and ecosystem services. Key results will include strengthened legislation and financial mechanisms for green development, incorporation of measures to conserve biodiversity and ecosystem services into local development plans, development of new tools for enhanced capacity for green development and improved systemic measures for conservation of globally threatened / iconic biodiversity.
- 2) Rangelands, forests and biodiversity are restored, and protected areas strengthened at landscape scale. Key results will include reduced degradation of 300,000 ha of rangelands, plus 20,000ha of boreal and 25,000 ha of saxaul forests, protected area system expanded by 0.94 million ha and strengthened, and threats to globally threatened / iconic biodiversity reduced.
- 3) Sustainable livelihoods provide benefits to local communities and support biodiversity. Results will include strengthened community groups, more sustainable livelihoods, public - private partnerships and raised public awareness for green development approaches.
- 4) Improved knowledge management, monitoring and evaluation supports sustainability and up-scaling. Results will include new and effective mechanisms for knowledge management, monitoring and evaluation and gender mainstreaming.

Overall the project aims to demonstrate how green development can deliver improved biodiversity and ecosystem services and resilience at landscape scale within the context of a changing climate.

Tasks:

- Comprehensive baseline studies relevant to all types of natural resources at soum level;
- Integrate all data and research work, develop future development planning based on the results derived from the following contractual services, planned and arranged by the project team:
 - Detailed forest inventory in pilot landscapes;

the project and organizing consultation meetings with local citizens; Incorporate them into the soum development planning;

Examine the current practice of different categories of land use and assessment of its suitability:

- Habitat maps of wild ungulates and assessment of annual pasture use from livestock grazing versus wild ungulates;
- Habitat maps of predators and calculation of food stock for predators in consultation with the team working on baseline survey of the indicator species (the baseline survey of indicator species will be used in the database and mapping);
- Recommendations on providing a room for wild animals and rare plant habitats and expected measures of biodiversity conservation;
- Detailed pasture carrying capacity map by seasonal patterns of pasture user groups in consultation with local agriculture, land officers to optimize pasture pressure throughout the year, e.g. the optimal number of livestock per hectare depending on pasture growth mass (to be calculated based on the required pasture growth mass per livestock for employing efficient livestock breeding);
- Comparative analysis and mapping of at least three scenarios based on different management of livestock number and herd structure by 7 years of planning. Hence: 1. Scenario for same rate of recent or current increase of livestock heads; 2. Scenario for decreasing livestock heads in medium rate and increasing quality; and 3. Scenario for decreasing livestock heads in intensive rate, better herd structure and increasing quality;
- The pasture water management plan for well rehabilitation, protecting/ maintaining surface water resources and construction of ponds and reservoirs to be included in the map in consultation with the River basin Administration, relevant Departments of aimag and MET;
- Conduct consultations meetings, forums and discussions and get an endorsement from the Bagh and Soum Representative meetings;
