ITB 19.158, Section 3, No. 14 – 22 Page 18	Allowable Manner of Submitting Bids Submission by email:	Allowable Manner of Submitting Bids Submission by email: <b>soumissions.haiti@undp.org</b>
ITB 19.158, Section 3, No. 14 – 23 Page 18	Deadline for Submission: July 29, 2019, Before 16h30 (Haiti Local Time)	Deadline for Submission: August 05, 2019, Before 16h30 (Haiti Local Time)
ITB 19.158, Section 3, No. 17 – 25 Page 18	Date, time and venue for the opening of bid: July 30, 2019 10:00 AM. 14, Rue Reimbold, Bourdon, P.B. 557 Port-au-Prince, Haiti	Date, time and venue for the opening of bid: August 06, 2019 10:00 AM. 14, Rue Reimbold, Bourdon, P.B. 557 Port-au-Prince, Haiti

Procurement unit seizes this opportunity to provide clarifications to various questions received from potential bidders.

- 1) Local company for installation and after sales service/support: the tender asks for installation of sirens, training and after sales services and support. Such services should be done by a local company which will be trained and supported by the supplier during the installation and commissioning process.  
We therefore are looking for a Haiti based company with experience in electrical installations and/or radio communications.  
Do you have any preferred installer, based in Haiti for such installations? Could you recommend some companies? Contact details?

**Response:** We do not have a preferred installer for this work. We cannot interfere in any stage of completion of work. You have to find the partnership to realize the contract. If you choose to do a consortium, it should be legally constituted. But you can also choose to subcontract one part of the work to a local supplier. In any case, you have to present all documentation for the chosen company or firm to be analyzed in terms of compliance.

- 2) Control Centre: We understand the sirens shall be controlled (activated) and monitored centrally. Is there already an existing control centre to which the sirens have to be connected? If not, is there any specification for a new a control centre, from where all sirens can be monitored, controlled and activated?

**Response:** It could be locally using a local control panel connected to the siren by cable. Each siren will have its own control and that operator will control that only siren and no others.

Procurement Unit hopes to receive your bid (technical and financial offer) on Monday, August 05, 2019 by 16:30 (Haiti time).

Best regards,
