Bid Bulletin No. 8

**ITB-117-PHL-2019: Supply, Delivery, and Installation of a Secured High Frequency (HF) Voice
and Data Communication System in Maguindanao and Manila, Philippines**

Dear All,

Please find below UNDP's responses to additional clarifications sent by bidders.

CLARIFICATIONS FROM BIDDERS	UNDP RESPONSES
1) Are fans required for the ruggedized casing?	Casing must have proper ventilation.
2) Should the server computer be put inside rugged casing? The dimension of the casing is smaller than the server computer dimension.	Computer server with standard size (1 rack unit) will fit inside a ruggedized casing. It must be designed to fit the HF radios and other equipment (less antenna) in one casing.

Please be guided accordingly.
