

## Questions and Answers

### ITB/FJI/JPN/005/19 (re-announcement) – supply of different vehicles

## Questions and Answers

Date: 9 January 2020

Question	Answer
Lot 1 – 3.5 Ton Crane Truck Are there any further specs for the crane unit – just stating capacity of 2000Kg doesn't pinpoint the right model. Are you looking for a stiff arm or knuckleboom unit, and at how many metres from the truck do you need to be able to lift 2000KG (the latter has a significant bearing on the model selected).	Further specs for crane - Stiff arm crane unit, Lifting capacity / Outreach from truck body - 6.5 ton/2.0 m - 2.27 ton/6.0 m - 0.3 ton/18.7 m. We would prefer the second truck or similar on the list attached hereto. The truck on the list is HD120 4x2.
