1. Background

In recognition of the critical need to improve global access to sustainable, affordable and environmentally sound energy services and resources and to coordinate activities to increase awareness of the importance of addressing energy issues, the United Nations Secretary-General launched a global initiative on **Sustainable Energy for All (SE4ALL)** in 2011. The initiative is aimed at mobilizing action from governments, the private sector, and civil society around the following three objectives to be reached by 2030: providing universal access to modern energy services; doubling the global rate of improvement in energy efficiency; and doubling the share of renewable energy in the global energy mix.

For Sub-Saharan Africa (SSA) biomass energy accounts for more than 70% of total final energy consumption. The International Energy Agency (IEA) gives the following final energy consumption figures for 2010 in million tonne of oil equivalent (Mtoe): SSA consumes a total of 396.5 of which biomass is 288.3 (73%), and of which residential biomass is 248.7 (63%). About 80%, of the population of Sub-Saharan Africa (SSA), nearly 700 million people, rely on biomass for cooking, particularly fuelwood in rural areas and charcoal in urban areas.

Given that biomass accounts for more than 50% of energy consumption in most if not all of SSA countries, the African response to the SE4ALL initiative, led through a partnership between the NEPAD Planning and Coordinating Agency (NPCA), the African Union Commission (AUC), the United Nations Development Programme (UNDP), and the African Development Bank (AfDB), has developed the **African Sustainable Charcoal Policy Framework (ASCPF)** to guide the implementation of SE4ALL in Africa. In recognition of the varied conditions across African countries and regions, the ASCPF is intended to serve as guidance to member states and Regional Economic Communities (RECs) on how to formulate charcoal policies. The objectives of the ASCPF are twofold:

- i. to enhance awareness in Africa, particularly among African decision-makers and policymakers, about the potential of sustainable charcoal in contributing to energy security; and
- ii. to build a consensus on a shared framework that inspires and provides guidance to individual countries and regions in developing charcoal and fuelwood policies and regulations intended to formalize and modernize the charcoal sector along all stages of the charcoal value chain.

The fifteen member states of the Economic Community of West African States (ECOWAS) have expressed the need to mainstream renewable energy and energy efficiency into their national policies. In this regard the **ECOWAS Renewable Energy Policy (EREP)** and the **ECOWAS Energy Efficiency Policy (EEEP)** were adopted by the ECOWAS Council of Ministers and the Authority of Heads of State and Government of Energy in 2013. The vision of the EREP and the EEEP is to secure an increasing and comprehensive share of the Member States' energy supplies and services from timely, reliable, sufficient, efficient, cost-effective uses of renewable energy sources enabling universal access to electricity by 2030 and a more sustainable, efficient and safe provision of **domestic energy services for cooking**. The EREP and EEEP recognize that woodfuels (firewood and charcoal), which are used for domestic cooking purposes and commercial applications, as one of the renewable energy options that are not utilised efficiently but have the potential for development in the ECOWAS region. In the region, woodfuels represent the bulk of the final energy consumption, reaching up to 70-85 % in some countries. Within these policy frameworks and specifically under the

programme for Supporting Energy Efficiency Activities in West Africa, a clean cooking initiative was launched in October 2012. The West African Clean Cooking Alliance (WACCA) aims to ensure that the entire population in the region has access to clean, safe, efficient and affordable cooking fuels and devices by 2030. WACCA will explore both the supply and demand side of the cooking chain and introduce efficiency where necessary to improve the fuel supply and demand characteristics for better access and improved living conditions.

UNDP recognizes that the charcoal sector provides some of the most important opportunities to not only prevent and reduce greenhouse gas emissions, but also to provide significant and highly relevant sustainable development outcomes for developing countries, and in particular in Least Developed Countries (LDCs). The Nationally Appropriate Mitigation Actions (NAMAs) modality can provide the essential holistic framework for the improvement of the complete value chain in the charcoal sector. During recent years, NAMAs have become a key issue of climate change mitigation negotiations in the United Nations Framework Convention on Climate Change (UNFCCC) process. At present, NAMA is considered as a key tool to be used by developing countries to structure and promote their potential greenhouse gas emission reductions.

At COP18 in Doha, Parties agreed to establish a work programme to further understand the diversity of NAMAs. This work programme will focus on: information required to enhance understanding of NAMAs (including estimated mitigation impacts of NAMAs, underlying assumptions and methodologies for estimating mitigation impacts, and sectors and gases covered); need for support for the preparation and implementation of NAMAs; and the role of the Registry in matching NAMAs with international technical and financial support. While it is clear that NAMAs are a central instrument for addressing GHG emission reductions of developing countries, international negotiations have neither provided any official definition of what information should be included in the NAMAs, nor sufficiently clarified aspects such as international measurement, reporting and verification (MRV) mechanisms and guidelines to maintain environmental integrity. It is expected that clarity on some of these aspects will emerge from bottom-up based experiences of countries when developing and implementing NAMAs.

As the understanding of the NAMA concept is still evolving, there is, as of to date, relatively little on the ground experience with respect to turning the concept into concrete actions. In 2012, UNDP undertook a NAMA study of sustainable charcoal in Uganda. The core part of the Uganda NAMA study was the design of an improved value chain for Uganda that incorporates measuring, reporting and long-term verification. UNDP financed this study with the goal that the development of the NAMA concept would provide an important opportunity for Uganda to help to shape its future low carbon development. In this regard, UNDP hopes that by funding the development of a NAMA policy framework it can contribute to further shaping the NAMA concept and translating it into action. UNDP is also determined to assist developing countries in implementing low-carbon interventions and bringing long-term sustainable development benefits. The development of a NAMA policy framework on Sustainable Charcoal in a selected country in the ECOWAS region is an exciting mitigation programme that can achieve both objectives.

2. Objective

The overall purpose of this consultancy is to develop a NAMA policy framework on Sustainable Charcoal in a selected country in the ECOWAS region, to guide the development of nationally appropriate mitigation actions along the charcoal value chain, i.e. forest management, production, trade and final consumption. The NAMA policy framework on Sustainable Charcoal will be developed in the context of the ECOWAS renewable energy and energy efficiency policies which provide a shared vision for the 15 ECOWAS member states on the efficient use of renewable energy resources and devices in the region.

Specific tasks:

- introduce the key characteristics of the charcoal sector and the current outlook, including linkages with development priorities and relevant planning processes;
- contrast reference (baseline) and mitigation scenarios i.e. with and without mitigation measures;
- analyze the sustainable societal co-benefits from the NAMA-related mitigation measures;

- detail possible policies, measures and instruments that could be used to achieve the earlier described mitigation actions and societal co-benefits;
- describe how the impact of the policy framework will be assessed (explain measuring, reporting and verification (MRV) procedures for mitigation measures and sustainable societal benefits, and list potential key indicators that could be used to gauge progress towards achieving the goals under the NAMA policy framework); and
- recommend good practices for implementation of the policy framework, including institutional structures.
