

**Responses to the requests for clarifications received from the potential Offerors
under RFQ/UNDP/708/2015 for
supply and delivery of coastal slurry pipeline**

1. Question: What is the thickness of the flanges and what surface treatment, electric galvanized or hot galvanized?

Answer: Thickness of the flanges according to GOST 12820-80 is 22 mm. According to RFQ flange material is steel. The flanges do not require any surface treatment, but in case if the offered flanges are galvanized the Offeror can use any galvanization type (electric galvanized or hot galvanized).
