

QUESTIONS AND ANSWERS REPORT

<u>To:</u>	Consultants / Bidders / Offerors
<u>From:</u>	UNDP Lebanon
<u>Subject:</u>	the installation of 150 LED lighting posts on the existing electricity poles with all the needed accessories and equipment, and link them to the main power transformer at the semicircular road and the main roads in Bebnine, Lebanon
<u>Reference:</u>	LEB/CO RFQ/136/15
<u>Date:</u>	September 03, 2015

UNDP Lebanon Procurement Unit has received several questions regarding the subject Tendering Procedure. All questions received to-date are documented below with respective answers.

Questions and Answers		
1	Q.	Per similar projects achieved, we know that it is always good for the project if the bidders are well informed on the shape & status of the existing light poles. Apparently such information will effect design, configuration, cost, shortly overall bid offer. I would kindly request a few current pictures of the existing light poles on which LED lamps are planned to be installed.
	A.	Please refer to the attached Two (2) pictures of the existing light poles on which LED lamps are planned to be installed
2	Q.	How long it is required technical support after the end of the works?
	A.	Since we had requested a minimum of 1 year warranty on parts and labor, the technical support should be for the same timeframe- 1 year.

3	Q.	What do you mean exactly by "Provision of Service Unit when pulled out for maintenance/repair"? (Service staff or machinery, for example genset, generator...)?
	A.	As for the Provision of Service Unit when pulled out for maintenance/ repair, if a unit is beyond repair on site and its absence will negatively impact the overall operation, we are requesting Provision of Service Unit- basically for LED Street Lighting Fixture and Control Panel boards for the period of the 1 year warranty.
