## TERMS OF REFERENCE

<b>Scope of services:</b>	Updating of mapping information on accurate boundaries of Ijevan and Noyemberyan forest enterprises (Tavush marz) and surrounding community lands and protected areas, becoming a part of respective governmental decision on approval of the clarified boundaries
<b>Duration:</b>	December 2016 - March 2017
<b>Location:</b>	Ijevan, Noyemberyan of RoA Tavush Marz
<b>Project title:</b>	UNDP/GEF “Mainstreaming Sustainable Land and Forest Management in Mountain Landscapes of North-eastern Armenia”

**I. Project Background**

The long-term solution sought is to facilitate the shift from unsustainable to sustainable forest management in NE Armenia. The target area contains 65% of Armenia’s forest resources and provides essential ecosystem services including water provision (for urban use and food production), land slide control and carbon storage and sequestration. The project will promote an integrated approach towards fostering sustainable forest management – seeking to balance environmental management with development and community needs.

The project major objective is sustainable land and forest management in the North-eastern Armenia to secure continued flow of multiple ecosystem services (such as water provision, land slide control and carbon storage/sequestration) and to ensure conservation of critical wildlife habitats. This would be achieved during the four years of implementation through two main components, namely: (i) Integration of sustainable forest and land management objectives into planning and management of forest ecosystems to reduce degradation and enhance ecosystem services in two marzes covering 0.65 million hectares; and (ii) Sustainable Forest Management practices effectively demonstrating reduced pressure on high conservation forests and maintaining flow of ecosystem services.

It will attempt to reduce conflicting forest land-uses and improve the sustainability of forest management so as to maintain the flow of vital ecosystem services and sustain the livelihoods of local forest-dependent communities (and downstream users). This platform will be underpinned by a robust forest management planning support system and monitoring framework that will inform plans for the forest estate.
