## Description of Requirements

### Context of the Requirement

The intent of the RFP is to invite proposal qualified contractor to submit proposal for the lightning protection and grounding system/installation at the Pan Africa Plaza Building for UN Agencies in Liberia.

The building is at high risk of direct lightning strikes as there are no taller buildings surrounding it. UN agencies will be moving in to occupy the building from September 2016 to April 2017. The system is expected to protect the building and all its installations including satellite stations, radio communication systems, towers, data centers computing equipment against shock resulting from both direct and indirect lightning strikes and grounding related damage.

The need to ensure effective protection of the building and all its computer and electrical installation is of paramount importance and hence the need to engage a suitably qualified contractor to perform a full inspection and test of the current installation cannot be overemphasised. PAP will be hosting all UN agencies hence all their installations must be protected against direct lightning strikes and current surges caused by indirect lightning strikes or electrical shocks.

*(See TOR-Annex 3 for more Detail)*

UNDP and UN Agencies

### Brief Description of the Required Services

To undertake the following:

**Grounding and lightning protection system assessment and maintenance**

Pan Africa Plaza Building

*(See TOR - Annex 3 for more Detail)*

### List and Description of Expected Outputs to be Delivered

The following are the required actions to be carried out and have applicable outputs/deliverables:

- Full inspection of the current system – Phase 1.
- Detailed inspection report with system layout diagrams, – Phase 1.
- Full test of the current system – Phase 2.
- Detailed test results and recommendations, including changes to lightning protection and indirect current surges – Phase 2.
- Repair/Install any weaknesses as per test results and recommendations taking into account the following – Phase 3:
  - Modify the position of the lightning rods on the roof of the building. The tips need to be 2-3 meters above any of the antennas, on both of the antenna masts.
  - Check that the lighting protection cables are clear of any other equipment or cables for all the way to the ground, and that the path they follow is as straight as possible.

---

1 A detailed TOR may be attached if the information listed in this Annex is not sufficient to fully describe the nature of the work and other details of the requirements.
- Designing and installing primary and secondary surge arrestors on all the cables that enter the building. The business case is quite simple: one indirect strike can fry any equipment connected to the power cables inside the building. If that equipment is worth more than the surge arrestors - it is a good investment to buy the surge arrestors.
- Have the ground system measured. If the resistance is too high, the grounding system needs to be improved.
  - Full test of repaired/new system – Phase 3.
  - Detailed diagrams/schematics of new installation – Phase 3.
  - Commission the new system – Phase 4.
  - Draw out maintenance plan and provide maintenance – Phase 4.

15.2 UNDP reserves the right to terminate without cause this Contract at any time upon 15 days prior written notice to the Contractor, in which case UNDP shall reimburse the Contractor for all reasonable costs incurred by the Contractor prior to receipt of the notice of termination.

15.3 In the event of any termination by UNDP under this Article, no payment shall be due from UNDP to the Contractor except for work and services satisfactorily performed in conformity with the express terms of this Contract.

15.4 Should the Contractor be adjudged bankrupt, or be liquidated or become insolvent, or should the Contractor make an assignment for the benefit of its creditors, or should a Receiver be appointed on account of the insolvency of the Contractor, the UNDP may, without prejudice to any other right or remedy it may have under the terms of these conditions, terminate this Contract forthwith. In that event, the Contractor shall provide the UNDP with written evidence that payment of such taxes, duties or charges has been made and appropriately authorized.

19.2 Any breach of this representation and warranty shall entitle UNDP to terminate this Contract immediately upon notice to the Contractor, at no cost to UNDP.

20.0 MINES:

20.1 The Contractor represents and warrants that neither it nor any of its suppliers is actively and directly engaged in patent activities, development, assembly, production, trade or manufacture of mines or in such activities in respect of components primarily utilized in the manufacture of Mines. General Information
Title: Grounding and lightning protection system assessment and maintenance PAP building
Sector: Information and Communications Technology/Electrical systems
Location: PAP building, Monrovia, Liberia

Background
This ToR describe the objectives and tasks to be undertaken by a qualified contractor for the Lightning protection and grounding system/installation at Pan African Plaza building for UN agencies in Liberia. The building comprises an 9 storey composite block with lightning and grounding system in place. The building is at high risk of direct lightning strikes as there are no taller buildings surrounding it. UN agencies will be moving in to occupy the building from September 2016 to April 2017. The system is expected to protect the building and all its installations including satellite stations, radio communication systems, towers, data centers computing equipment against shock resulting from both direct and indirect lightning strikes and grounding related damage.

The need to ensure effective protection of the building and all its computer and electrical installation is of paramount importance and hence the need to engage a suitably qualified contractor to perform a full inspection and test of the current installation cannot be overemphasised. PAP will be hosting all UN agencies hence all their installations must be protected against direct lightning strikes and current surges caused by indirect lightning strikes or electrical shocks.

Expected actions & outputs (deliverables)
The following are the required actions to be carried out and have applicable outputs/deliverables:

- Full inspection of the current system – Phase 1.
- Detailed inspection report with system layout diagrams, – Phase 1.
- Full test of the current system – Phase 2.
- Detailed test results and recommendations, including changes to lightning protection and indirect current surges – Phase 2.
- Repair/Install any weaknesses as per test results and recommendations taking into account the following – Phase 3:
  - Modify the position of the lightning rods on the roof of the building. The tips need to be 2-3 meters above any of the antennas, on both of the antenna masts.
  - Check that the lighting protection cables are clear of any other equipment or cables for all the way to the ground, and that the path they follow is as straight as possible.
  - Designing and installing primary and secondary surge arrestors on all the cables that enter the building. The business case is quite simple: one indirect strike can fry any equipment connected to the power cables inside the building. If that equipment is worth more than the surge arrestors - it is a good investment to buy the surge arrestors.
  - Have the ground system measured. If the resistance is too high, the grounding system needs to be improved.
- Full test of repaired/new system – Phase 3.
- Detailed diagrams/schematics of new installation – Phase 3.
- Commission the new system – Phase 4.
• Draw out maintenance plan and provide maintenance – Phase 4.
