Project Name: Training for All

Technical Training Experts – PEEG

Duration of the training: within 4 months

Subject: Trainers – Electricity Infrastructure Rehabilitation (Generation).

1. Background:

Unrest in the Syrian Arab Republic has been on-going since March 2011 and has deteriorated ever since. The situation has recently worsened as the number of people in need of humanitarian assistance has increased many folds since March 2011 and is now estimated at over 9.3 million people (SRP, 2015). Sixty-five per cent of the population or 13.9 million persons are living now in poverty, with 7.9 million people becoming poor since the beginning of the crisis, of which 4.4 million living in extreme poverty as households spent their savings and exhausted their coping strategies (SCPR, 2014). Among the affected people, the number of IDPs has grown significantly and is now estimated at 6.5 million. Many families had to leave their homes and seek refuge in schools, public gardens, and relatives' houses or in surrounding countries because of violence but also scarcity of livelihoods, access to basic services and community infrastructure in their home towns and villages.

Electricity production and distribution was heavily affected by on-going hostilities (destruction, looting, sabotage, etc.). The reliable and sustainable electricity supply is essential to respond to the immediate humanitarian needs of crisis affected communities, namely for the operation of essential humanitarian services such as water supply, hospitals, schools, sewerage treatment plants and other community services. Several power plants are suffering serious shortages of spare parts for adequate operations and maintenance to replace those who have already attained their design life or have been damaged during operations. Thus, the need for targeted infrastructure rehabilitation programmes.

Since early recovery aims at turning the dividends of humanitarian action into sustainable crisis recovery, resilience building as well as development opportunities, capacity development of human resources is one of most effective means to enhance people's resilience and adaptability to the changing contexts. Capacity development – in its various forms and types - will equip affected people and institutions with adequate skills needed at the crisis and post crisis times. This would also contribute to improving their potential for employability and preparedness for a full-fledged community infrastructure rehabilitation as well as reconstruction programmes and ensure that the human capital is preserved for longer term recovery and developments paths.

The objective of this project is to provide electrical sector training opportunities aiming at the short-mid- and long-term resilience building of conflict-affected Syrians in keeping up and upgrading their skills and knowledge. This will enable Syrians to participate in the processes leading to the recovery

and reconstruction phases including electricity infrastructure rehabilitation and basic and social services restoration.
