GENEARL

1. ALL DIMENSIONS SHOWN ON STANDARD DETAIL DRAWINGS ARE IN MILLIMETRES UNLESS OTHERWISE INDICATED

2. ALL CONCRETE MATERIALS WHICH ARE IN CONTACT WITH SEWER SHALL BE SULFATE RESISTANCE CEMENT.

3. STEEL REINFORCEMENT SHALL BE GRADE 4200 kg/cm2 ACCORDING TO ASTM A615 OR EQUIVALENT

4. ALL MANHOLES/CHAMBERS, TANKS, AND ANY SURFACE CONTACTED WITH SEWAGE SHALL BE INTERNALLY TAR-EPOXY COATED AS SPECIFIED (2 COATS 250µm EACH COAT).

5. EXTERNAL CONCRETE SURFACES BELOW GROUND SHALL BE PROTECTED WITH COLD BITUMINOUS ((1000 µm) MINIMUM THICKNESS) WATERPROOF TANKING MEMBRANE AS SPECIFIED.

6. A BACKDROP OR BRANCH SEWER INLET SHALL HAVE LEVEL SOFFITS WITH A LARGER PIPE DIAMETER. THE BACKDROP OR BRANCH SEWERS SHALL HAVE INVERT LEVELS AT MAIN SEWER SPRING LINES ON PIPES OF THE SAME DIAMETER.

7. ALL SEWERAGE MANHOLES AND INSPECTION CHAMBERS SHALL BE FITTED WITH CAST IRON COVER AND FRAMES WITH A CLEAR OPENING OF 600 x 600mm

8. CONCRETE SUPPORT SHALL BE PROVIDED FOR TEH PRESSURE PIPE LINES WHERE EVER PRESSURE LINE IS LAYING ABOVE THE GROUND

9. CONCRETE SURROUND SHALL BE PROVIDED (TO SEWER PIPES WHERE THE COVER IS LESS THAN 0.7 METERS FOR PIPE DIAMETER <150mm AND 0.9 METERS FOR PIPE DIAMETER ⩾150mm) THE PIPELINES LIE WITHIN A STRIP OF 20 METRE EACH SIDE OF THE CENTERLINE OF ROAD CORRIDORS.

10. OVER-EXCAVATION BELOW PIPELINES AT MANHOLE EXCAVATIONS SHALL BE FILLED WITH TYPE 'B150' CONCRETE TO THE PIPE TRENCH FORMATION LEVEL OVER THE TRENCH WIDTH.

11. w\c RATIO MAX (45%)

12. MIN CONCRETE COVER TO REINFORCEMENT IS 50mm

Electromagnetic Flow Sensor 2D

Important Note

- Cleaning of flow sensor The flow sensor is highly resistant against dirt and the measurement will rarely be influenced by anything. However, it is advisable to create a possibility for cleaning just in front or behind the sensor

- Regular routine maintenance shall be carried out for the two manholes to prevent from sedimentation

Instructions for Installation

-① sewer manholes with different inlet out let levels

-② if the inlet pipe has a slope > 1%. Make sure that the outlet level of this pipe is bellow the inlet of the Flowmeter

-Slope for ② and ③ shall be 2% minimum

- ③ Inlet Section of Dn refer to BoQ

- ④ Outlet Section of Dn Refer To BoQ

- ⑤ Always free pipe shall be used to prevent back inflow sensor and to keep velocity at the maximum flow at least 1m/s

- ⑥ Opening for cleaning

- The crown of the sewer pipe in 1 shall be always higher than 2 at least 45 cm

- All concrete materials which are in contact with sewer shall be sulfate resistance cement.

- Dimensions that are shown for the Electromagnetic Flow Sensor is not a must Contractor can submit different dimensions that are shown in the table but all shall be approved before the Submission

- Location/s for the Electromagnetic flow meter in drawings D-007 are tentative and subjected to change according to the engineer Instructions, No Extra Costs will be paid for the contractor in case change for location is required by engineer

- Contractor Shall keep the existing Sewer Pipeline in operation during the Construction work, Contractor shall use temporary submersible pump and suction truck whenever its required to prevent over flood of sewer during the construction

-Pipe for Electromagnetic Flow Sensor shall be constructed parallel to the sewer existing Pipe, the existing sewer pipe shall be kept as emergency pipe.

NOTE:

1-All dimensions in mm unless otherwise indicated

2-Electromagnetic flow Sensor shall be installed according to the manufacture recombination sheet

3-incase section detail presented herein is un comply with the submitted electromagnetic flow sensor by contractor its contractor responsibility to present a detailed drawing on his own cost and shall be approved by the supervising engineer.

4-All concrete mixed shall be B300
