

UNDP Pacific Office

Clarification Q&A

Ref: ITB/FJI10/03/2019-MAFF Construction

1. On drawings SA.02 & A1.01 the chiller building has a fairly large "dotted" rectangle on the ceiling. What does this represent? – **Existing Chiller**
2. SA.01 has a 40' existing container to be removed to a new location. Is that a new location on the same site? Is so does it require foundations and services? – **Old 40' container to be removed as preparation for the new office container. No services/ footing required – Location to be confirmed during construction.**
3. A.01 requires the replacement of two roller doors, but there are no details or specification. Do you have size for these doors and are they motorised, etc? – **Specification and size to match existing**
4. Is there an existing town mains water supply to the site? (feeding the new toilet block) – **All services to connect to existing services – water supply, Septic Tank.**
5. There are 3 new container offices required but no details. If these to be purpose made fitted out office units are there quantities of the doors, windows, linings, fit-out, service requirements etc. Makes a big difference to the price. – **Pre Fitted container.**
6. Water tanks- the plans show 4 new tanks and the roof supply pipes but there is no information on the outflow from these tanks. i.e. what do these tanks supply, any pumps needed etc. – **New Water Tank to collect Rain water and to connect to existing water pump.**

Thanks
