Consultancy Services for Implementation of Two (2) x 200 kW Mini-Hydro Power Plants under the Project on Facilitating Renewable Energy & Energy Efficiency Applications for Greenhouse Gas Emission Reduction (FREAGER)

Location:	Home based with travel to Port Moresby and Eastern Highlands Province
Type of Contract:	Professional Service Contract with a firm
Project:	Facilitating Renewable Energy and Energy Efficiency Applications for Greenhouse Emission Reduction Project (FREAGER)
Languages Required:	English
Starting Date:	October 14, 2019
Duration of Initial Contract:	Approximately 18 months.

1. PROJECT DESCRIPTION

Approximately 15 percent of PNG's population has access to electricity. This presents an opportunity to leapfrog old technologies and move toward renewable energy and energy efficiency technologies. Aside from the potential to reduce current and future greenhouse gas emissions, these technologies may hold viable solutions to address PNG's power-short situation.

PNG's energy sector is characterized by a substantial production and consumption of petroleum. Crude oil production, while declining from its peak in 2007, in the past few years has again increased and now surpasses that mark. Natural gas production is growing rapidly in response to Government policy. Projected compound annual growth in primary energy consumption between 2013 and 2040 is roughly six percent. The greatest share of primary energy consumption is represented by petroleum oil products, which make up approximately 57 percent of domestic consumption.

The industrial sector is PNG's largest end user of energy. Industrial energy consumption is expected to continue to grow at a substantial rate. The second largest user of energy in PNG is the transportation sector. With agriculture and residential consumption making up a smaller share of end use. As the economy grows however, that share is expected to increase.

UNDP in partnership with the Global Environment Facility is delivering the *Facilitating Renewable Energy and Energy Efficiency Applications for Greenhouse Emission Reduction Project* or FREAGER (the 'Project'). An ambitious endeavour, it aims to demonstrate the potential of renewable and energy efficient technologies in PNG. It will be delivered under four components. These components are:

1. Analysis, assessment and improvements in energy policy and regulations.
2. The demonstration of the benefits of renewable energy and energy efficiency technology through pilot projects.
3. The development of models to better finance renewable energy and energy efficiency solutions among communities.

4. Efforts to increase normative change on the use of renewable energy and greater energy efficiency among decisions makers.

Together they will aim to demonstrate a range of renewable energy and energy efficient technologies to encourage their broader replication and up-take.

2. SERVICES REQUIRED

This assignment requires a range of services that will facilitate the procurement, delivery and installation of two mini-hydro facilities in Eastern Highlands Province. Each is expected to produce up to 200 kW of power. These facilities will be delivered in Gotomi and Miruma respectively. These will require the completion of, as a minimum:

- i. Detailed Feasibility Studies.
- ii. Social and environmental impact assessments.
- iii. Engineering designs.
- iv. Procurement of equipment and services.
- v. Construction, installation and commissioning of two facilities.

UNDP requires a consulting firm with suitable technical expertise and experience with similar assignments to deliver the required tasks in collaboration with national and subnational stakeholders.

The Project schedule for the two mini hydropower projects is expected to be implemented within eighteen (18) calendar months from signing of the contract.

The successful delivery of this assignment will require the following demonstrated technical and administrative expertise:

- A strong understanding of mini/micro hydropower generation and distribution.
- Application of innovative engineering designs that provide commercially viable mini-hydro power plants and grid systems.
- Stakeholder management and negotiation skills.
- Administrative, project management and time management skills.
- Strong written and oral communication skills that support the conveying of messages and concepts clearly and to various audiences.
- Ability to source high quality and value for money mini-hydro power equipment. Demonstrated understanding of installing and commissioning mini-hydro power equipment

3. SCOPE OF WORKS AND OUTPUTS

The objective of this assignment is to successfully conduct feasibility studies, design, cost and implement two (2) mini hydro power plants (with capacities of up to 200 kW); one in Gotomi and one in Miruma, Eastern Highland Province, Papua New Guinea. The feasibility will include site specific environmental and socio-economic impact assessments. The designs and installations will comply with regulatory standards. The procurement plan will identify appropriate equipment with relevant costings associated with the identified equipment and where to source them. Equipment identified during the design should be specific to the context and take into consideration value for money, ease of maintenance and sustainability. The price proposal should also cover the procurement, installation, testing, commissioning and defects liability covering a minimum of 12 months from the certified completion of equipment installation.

Services will also include capacity building of Government officials, community groups and PNG Power Limited (PPL) in areas relating to renewable energy and energy efficiency relevant to this assignment.

The scope of work shall comprise the following tasks as a minimum:

- Review of previous work carried out in the local area or similar environment of the same nature (desk-based research, consultations with community group members, local authority planning database, pre-feasibility study findings and recommendations, project documents etc) and develop a work plan to achieve the objective of the assignment.
- Conduct feasibility studies at Gotomi and Miruma on the potential of commercially viable mini-hydro systems to inform designs at each location that address as a minimum;
 - Catchment and hydrology, estimates of water resource availability (and generation of flow duration curve) and head measurements (including use of any appropriate software as required and with information on testing and validation of the software to be used).
 - Site visit(s) (walk-overs) to evaluate potential hydropower locations in Gotomi and Miruma.
 - Review of construction access to the sites.
 - Outline scheme layouts (equipment requirements), construction requirements for each hydro power site (intake, weir, powerhouse, penstock route etc).
 - Identification of suitable grid infrastructure in the local vicinity (and initial discussions with the communities in consultation with local governments/CCDA/PPL/UNDP as required).
 - Evaluation of estimated annual energy generation and CO2 emissions offset in relation to the two mini hydro power projects.
- A preliminary financial analysis with cost estimates (capital cost estimates and operations and maintenance) and revenue clearly noting method of estimation, details of relevant assumptions and uncertainty of estimates.
- An initial understanding of the following, with future recommendations should be provided:
 - Planning and consents (e.g. planning permission, Conservation and Environment Protection Authority environment permit requirements, landowner holdings etc.), this should consider the Environment Act 2000 and associated regulations in relation to run-of-river hydropower schemes where available.
 - Environmental impacts on the local area (e.g. Designated protected areas).
 - Risks of developing a mini hydropower plant at the site and how these risks are best mitigated in the future. .
- An evaluation of each of the mini hydropower plant sites are reviewed and preferred options are presented. This should as the minimum:
 - Consider technical and physical constraints of mini hydropower plant development..
 - Estimates of mini hydro power plant characteristics and key assumptions (head, design flow rate, design power output, annual energy yield).
 - Potential permitting and environmental constraints.
 - Account for most recent feed-in-tariff rates that may influence the sizing of the scheme and sizing to optimise benefit from the feed-in tariff.
 - Budget cost estimates (capital costs and operation and maintenance) and revenue.

The evaluation report will summarise the different mini hydro power plant options for the community in terms of the site/s available, the scale of generation, the likely income from the establishment of mini hydro power plants, key assumptions made, variations of costs etc. It should also include a high-level risk assessment based on the identified options and provide clear recommendations for CCDA/PPL/UNDP on how best to develop the project and any specific requirements for later project phases.

- Identification and provision of a list of equipment required to be procured for the installation of the specified mini hydro power plants. The list of equipment should include a cost and advice on where to procure. It is preferred that the full cost of the installation of these mini hydro power plants be made available as part of the design package.
- Obtain all relevant approvals to procure equipment and services to construct and install the mini hydro power plants at Gotomi and Miruma.
- Construct and install the two mini hydro power plants as per the approved plans.
- Commission the two mini hydro power plants and develop operations and maintenance training material for use by the operators.
- Conduct operations and maintenance training for operators for both projects and for PPL staff in Goroka and nominated local operators from Gotomi and Miruma.

4. METHODOLOGY

Consultants should specify how they intend to approach the delivery of the requirements set out above. The following activities are to be included:

- An introductory meeting with CCDA/PPL/UNDP and the Provincial Government to assess needs, preferences and aspirations, as well as to agree ways of working, timeframe, logistics, etc..
- Confirm the scope of works following the introductory meeting with any amendments / adjustments to the proposal highlighted and issued. It is anticipated there will be minimal changes where necessary.
- Site visits to Gotomi and Miruma to conduct walk-over surveys and data collection.
- Regularly submit monthly progress reports to CCDA/PPL/UNDP for quick decisions and adjustments as and where necessary.
- Presentation to CCDA/PPL/UNDP of the findings and draft reports, with opportunities for discussions and questions. The outcome of this will be used to finalise the reports.

5. EXPECTED OUTPUTS

The expected outputs or deliverables are as follow:

- An inception report outlining the findings of the analysis conducted and work plan for achieving the objective of this assignment.
- A report based on the feasibility studies conducted for Gotomi and Miruma should be provided electronically, outlining and analysing the findings including risks, constraints and risks with possible mitigation measures and recommendations as well as highlighting the site/s with the greatest potential.
