## Description of Requirements

Context of the Requirement	To Carry out an Energy Audit Experiment to promote Renewable energy uptake in large institutions
Implementing Partner of UNDP	UNDP – ACCELERATOR LAB
Brief Description of the Required Services <sup>1</sup>	<p>The Energy audit experiment is designed to engage a professional and technical institution with the aim of uncovering available energy efficient solutions in Uganda (National energy status) which includes performance, availability, affordability and access to fuels.</p> <p>The experiment will seek to answer the following hypothesis:</p> <p>'IF institutions had access to affordable robust energy saving solutions, THEN their consumption of biomass or wood fuel would significantly reduce and trigger a reversal in the rate of deforestation</p>
List and Description of Expected Outputs to be Delivered	<p><b>1. Introduction</b></p> <p>In 2019 UNDP launched the world's largest learning network around development challenges in an effort to re-imagine development for the 21st century. At the heart of this network is a cohort of 60 Accelerator Labs based in 60 countries.</p> <p>The Uganda Accelerator Lab identified "Deforestation" as a frontier issue to tackle for the first cycle among other prevailing development challenges. Over the last years, Uganda's forests have faced severe pressures mainly from agricultural conversion as a result of population increase, urban demand for charcoal and wood fuel, over grazing, uncontrolled timber harvesting and policy failures. About 58.9 % of the firewood used for cooking is obtained from natural forests, 34.6 % is collected from plantation/planted forests (NEMA, 2011). Over 90% of the households use wood fuel for cooking, (NEMA, 2018) of these, 18% depend on charcoal for cooking while another 78% depend on firewood.</p> <p>As result, the rate of deforestation is on the rise leading to air pollution, increasing levels of poisonous gases and environmental heat and the resulting effect of Climate change which is being felt now more than ever.</p> <p>The lab has engaged in numerous intensive activities to identify and map-out the drivers of deforestation with stakeholders. This also included a Data workshop that was convened to explore the most recent data on the drivers of deforestation, the rate of forest cover loss and the most affected regions in the country. Additionally, the lab did a nationwide 'call for solutions' that was broadcast on different channels of media to identify interventions by communities, individuals, entrepreneurs and organizations in attempting to solve the issue of Deforestation. These activities</p>

	<p>culminated into a solutions workshop to understand more deeply the strength and opportunities that lie within the existing solutions.</p> <p>Uganda has a unique potential of alternative renewable energy resources including hydropower, solar, geothermal, wind and biomass. In the last ten years Uganda has focused her energy sector investment on increasing energy access by increasing energy supply. What has been the emphasis for most interventions is access to renewable energy technologies and what has been majorly overlooked is the connection between renewable energy access, affordability, availability and efficiency. This has retarded the uptake and adoption of these much-needed technologies by households and large institutions who are the biggest consumers of wood fuel.</p> <p>In light of this, the UNDP Accelerator Lab would like to undertake an <b>‘Energy audit experiment’</b> on available energy efficient solutions in Uganda focusing on their performance, availability, affordability and access to fuels. More still, through this energy audit the lab is interested in understanding the rate of biomass consumption and cost- benefit analysis by large institutions which would guide the choice of an appropriate technology to install when the institution is making such a decision.</p> <p><b>2. Objectives</b></p> <p>The Energy audit experiment is designed to engage a professional and technical institution with the aim of uncovering available energy efficient solutions in Uganda (National energy status) which includes performance, availability, affordability and access to fuels.</p> <p>The experiment will seek to answer the following hypothesis:</p> <p><b><i>‘IF institutions had access to affordable robust energy saving solutions, THEN their consumption of biomass or wood fuel would significantly reduce and trigger a reversal in the rate of deforestation.</i></b></p> <p><b>The Specific objectives of this experiment include;</b></p> <ol style="list-style-type: none"> <li>1. To analyze the renewable energy landscape in Uganda and determine the performance, availability, affordability and access to fuels of energy efficient solutions in Uganda.</li> <li>2. To understand the rate of biomass consumption by large institutions which would guide the choice of an appropriate technology to install when the institution is making a decision.</li> </ol>
--	---

3. To perform a cost benefit analysis through a “kitchen laboratory test” on large institutions to determine the difference in expenditures on alternatives of energy.

The experiment will test the following attributes:

1. Affordability of fuel and technology
2. Availability of fuel and technology
3. Performance of technology including energy consumption
4. Cost benefit analysis on the choice of technology
5. Social and behavioral tendencies by institutions and household in the choice and use of renewable energy technologies.

### **3. Methodology**

The selected firm must describe how it will deliver on the ToRs; providing a detailed description of the proposed methodology appropriate to the areas to be covered, comprehensive targeting, local conditions and context of the work. Further, methodology should indicate how quality assurance will be ensured.

### **4. Management Arrangements**

The consultancy firm will work hand in hand with the Accelerator Lab team under the leadership of the Team Leader/Focal Point in addition with the identified institution to perform the energy audit through consultation of stakeholders and the actual technical design and implementation of the experiment.

### **5. Scope of work and deliverables**

- i. An analysis of performance, availability and affordability of renewable energy technologies including electricity, that can be used in institutions
- ii. Cost- Benefit analysis on the choice of efficient technology including electricity by large institutions.
- iii. Key factors that influence institutional culture and foster behavioral change in energy adoption and use

### **6. Outcomes**

- i. The energy audit experiment will reveal the available energy efficient solutions in Uganda focusing on their performance, availability, affordability and access to fuels.
- ii. The analysis will uncover the rate of biomass consumption and cost-benefit analysis by large institutions upon which they can base themselves to choose an appropriate technology to install.

- iii. The results from the experiment will reveal which technologies can cause a significant reduction in uptake of wood fuel for cooking by institutions and contribute to reversing the rate of deforestation
