TERMS OF REFERENCE

Country:	Viet Nam
Project name:	Ending Plastic Pollution Innovation Challenge (EPPIC)
Assignment:	01 National contractor to develop a Mobile app and a website to map Plastic Trash Hotspots
Expected duration:	Phase 1: Website and mobile-app development: May to August 2020 Phase 2: 24/7 O&M services from June 2020 to December 2022
Duty station:	Home-based, Viet Nam
Reporting to:	Programme Analyst Waste/Chemical, and CCE Media & Communications Analyst - UNDP Viet Nam Climate Change & Environment Unit

1 GENERAL BACKGROUND

Plastic use is expected to reach unprecedented levels in the coming decades, doubling within 15 years and more than quadruple by 2050. Moreover, the petrochemical industry's demand for oil is expected to accelerate and reach over half of global oil consumption growth by 2040. 80 percent of plastic found in the ocean originates from land-based sources, and 8 million tons of plastic enter the sea every year. Plastic waste poses high risks to aquatic life, with serious consequences for the ocean ecosystem and the sustainability of fisheries.

Tackling plastic pollution entails developing strategies for a range of sectors: packaging and construction, but also textiles and consumer products. Although the current awareness campaigns have mostly shed light on the over-use of single-use plastic by the food and beverage industries, this is only the tip of the iceberg and less commonly identified sectors deserve equal attention.

Four ASEAN member countries (Viet Nam, Indonesia, Thailand, and the Philippines) are responsible, with China, for 60 percent of the plastic discharged into the ocean every year (Ocean Conservancy, 2015). These countries are indeed large plastic producers and importers, but they also possess limited waste management systems, leading to leakage of plastics into the environment. Constraints to effective implementation of such waste systems include rapid urbanisation, population growth, and increase in per capita income leading to increased consumption; alongside lack of environmental awareness. However, the topic of plastic pollution is gaining momentum, and ASEAN member countries endorsed in June 2019, the Bangkok Declaration on Combating Marine Debris in the ASEAN region.

Plastic pollution can only be reduced by a system-level shift towards a circular economy⁸, including both bottom-up and top-down approaches. Consequently, there is a need to identify and leverage existing solutions aimed at preventing the generation of plastic waste and improving local waste management

⁸Looking beyond the current take-make-waste extractive industrial model, a circular economy aims to redefine growth, focusing on positive society-wide benefits. It entails gradually decoupling economic activity from the consumption of finite resources and designing waste out of the system. Underpinned by a transition to renewable energy sources, the circular model builds economic, natural, and social capital. It is based on three principles: Design out waste and pollution, Keep products and materials in use, Regenerate natural systems.

systems.

The project *Ending Plastic Pollution Innovation Challenge (EPPIC)* seeks to reduce plastic pollution in coastal areas in Viet Nam and Thailand in 2020, followed by Indonesia and the Philippines in 2021, contributing to the achievement of SDG 14 (Life Below Water) and SDG 12 (Responsible Production and Consumption). EPPIC will bring together citizens, local governments, and the private sector to collaborate in establishing effective and innovative solutions. The EPPIC competition is also the opportunity to drive change by raising awareness, collecting lessons learned and trying new approaches to address localised plastic issues. It intends to deliver two outcomes:

- **OUTCOME 1:** A portfolio of solutions is selected, supported and scaled-up through the EPPIC in four countries (Viet Nam, Thailand, Indonesia, and the Philippines).
- **OUTCOME 2:** Capacity building in Viet Nam and knowledge, cooperation, networking in ASEAN countries for prevention and reduction of plastic waste is increased.
