Project/Program Title:	Multi-City Challenge
Duty Station:	Home based with possible travel to Singapore
Duration:	Up to 126 days
Expected Start Date:	June 1, 2020

I. BACKGROUND / PROJECT DESCRIPTION

The UNDP Global Centre for Technology, Innovation and Sustainable Development (the 'Global Centre') aims to identify, co-design and share innovative and technological solutions for sustainable development. We aim to catalyse new insights, partnerships and action on the ground in the countries where UNDP works. Our initial areas of focus are: Sustainable Agriculture, Sustainable Finance, and Smart Cities and Digitalisation. We aim to leverage expertise in Singapore, as well as across the network of 60+ new UNDP Accelerator Labs, and from experts and partners around the globe.

The Global Centre is a joint initiative of the Singapore Government and UNDP, currently being led by a small team that is focused on programme and partnership development – both with the public and private sector in Singapore and international partners (including the above UNDP network). Singapore Government partners include the Ministry of Foreign Affairs (MFA), the Ministry of Environment and Water Resources (MEWR), the Public Service Division, and the Economic Development Board (EDB).

As part of our work on Smart Cities and Digitalisation, we are looking to undertake a 'multi-city challenge' initiative. This will provide public servants across up to five African cities with virtual coaching to build problem-definition skills, as part of identifying a small number of smart city issues that may be explored through an innovation challenge. Following this, the final issues will be featured in an innovation challenge – in order to identify promising solutions from citizens, civil servants, and other stakeholders.

Please note, this project comprises the coaching, problem-definition, and launch of the innovation challenge. Identifying and developing solutions submitted to the challenge is not in the scope of this Terms of Reference.

II. SCOPE OF THE WORK

Cities need to solve increasingly complex problems for growing populations with fewer resources. To do more with less, municipal governments need to become more agile in how they identify and implement effective policies and services. To that end, public institutions are turning to open innovation --also known as crowdsourcing -- to open up the process of identifying both good ideas and the evidence to support their implementation to citizens, civil servants, and organizations. After all, the greatest asset of our cities is their citizens and by tapping the collective intelligence and collective action of our communities, we can develop solutions to public problems that are more effective and more legitimate. Today's problems are complex, interdependent and know no boundaries; the processes for solving them should not either.

This is why we propose to launch a six-month Multi-City Challenge across up to five African cities. The Multi-City Challenge will be a process by which cities facing a common issue pool expertise from residents and experts across borders (and in the local innovation ecosystem) to discover and implement innovative solutions.

A multi-city challenge is best used in connection with those issues for which there is a lack of clear consensus about which solutions to use. Crucial to success is political support from the Mayor and top-level officials for an open government approach and the choice of problems. Also essential is that those officials responsible for implementation of the solutions participate from the outset.

Why a Multi-City Challenge

The ultimate aspiration of a multi-city challenge is to sustainably improve the capacity of communities to **solve the most pressing public problems** they face. By connecting expert knowledge with local expertise, cities can uncover new and creative solutions to well-scoped problems. By working across cities to solve a shared problem, cities increase the likelihood of solving issues on which they have had trouble making progress alone. Residents' participation in proposing solutions and developing implementation plans -- while also receiving coaching -- will legitimise courses of action on the problem, bring new knowledge and increase the diversity of expertise available to solve the problem. Finally, collaboration between public officials and residents from different cities to identify problems and solutions will create economies of scale, multiplying the innovation capacity of these teams to address commonly shared problems that have not been solved by one city alone.

Overall, a multi-city challenge pursues eight objectives - in every city:

In the short-term

1. *Problem-solving*: by making visible and measurable progress on the issue and also constituting a database of ready-made solutions on the issue that could be applicable to other cities.
2. *Training at scale and capacity-building*: by introducing cities to a model for open innovation for solving public problems, training their public officials and producing all the infrastructure and materials that they need to replicate the process - and in the long run by motivating cities to take on challenges on their own, autonomously.
3. *Public adoption and social cohesion*: by ensuring that solutions benefit from total public support.
4. *Resources efficiency*: by pooling resources so that policy change harnesses the best of local and expert knowledge.

In the medium and long term

5. *Institutional shift and replicable process*: by giving local government a platform they can reuse and experience to shift institutional culture and embed in its governance inclusive and participatory methods, data-driven problem-solving, and lasting relationships between departments and between cities. A side ambition is that ultimately cities will develop methodologies of their own to feed citizen and professional expertise into their governance.
6. *Community development*: by attracting citizens to participate in public life and identifying new local leaders / public entrepreneurs.
7. *Intercity relationship*: development of partnerships and further collaboration between cities to solve public problems.
8. *Contagion*: by attracting other cities to follow the example and create a network that extrapolates the benefits to other surrounding cities with less resources.

About the Challenge

The Challenge will have three components:

- 1) **Issue Selection** - identifying urgent problems of common interest to partner cities. The contractor will work with cities to select 3-5 core problems on which to focus within a given sector (waste, resilience, etc) that will have been previously identified across UNDP Country Offices. The objective is to train public servants and support them through a workshop, and also cross-coach to improve the quality of their problem definition. (1 month).
- 2) **Problem Definition** - Defining those problems with specificity with the input of public servants and residents, and to select two priority issues. (2 months).

- 3) **Open Innovation** - Running an open innovation competition across cities to source innovative solutions. A call to residents, businesses and civil society to propose solutions. Cities pick the leading 2 to deploy for each problem. (2 months).

Please note, this project comprises the coaching, problem-definition, and launch of the innovation challenge. Identifying and developing solutions submitted to the challenge is not in the scope of this Terms of Reference.

III. EXPECTED OUTPUTS AND DELIVERABLES

The Challenge begins by providing public servants with the time and resources to reflect and frame pressing community problems and does so across silos in order to flex the muscle of cross-departmental collaboration. Research suggests training public officials is effective at shifting institutional culture towards one of open innovation and participation, as shown by the impact of Taiwan's ambitious Participation Officers Network, and lateral connections across public institutions and exposure to new skills and methods can increase government capacity and openness. This type of programming builds capacity within the organization while providing scaffolding for a network within government that adopts programs like City Challenges.

To that regard, the project will refine problem definition through the following chronological steps:

- **Kick-off:** A virtual meeting in every city with senior civil servants, elected officials, representatives of the civil society and members of the project team. The contractor will support in the explanation of the project and help to ensure political buy-in from the start, define shared norms, explicit shared principles (to be openly published) and objectives for the rest of the project.
- **An online workshop:** In each city, 15-20 top and mid-level officials will be introduced face-to-face to the general mindset, values and mechanics of open governance and then be trained to define problems and tap local and global expertise to solve them. The contractor will lead the training. The objective is that the public officials learn how to define and prioritise problems and describe their root causes in preparation for crowd- and expert sourcing solutions. Together with the city officials and UNDP contacts, relevant stakeholders and civil society organisations will also be invited to participate.
- **Online training 1:** The contractor will design and deliver an online session for civil servants from each city (5-10) on how to gather data to refine public problems and solve them.(part I)
- **Field research:** Civil servants will be given a few days to interview stakeholders and some citizens in their city to refine their problem understanding. The firm will provide guidance on the methodology to use and templates for the civil servants to gather the data, aligning with the contents of the first training session.
- **Online training 2:** The contractor will design and deliver an online session for civil servants from each city (5-10) on how to gather data to refine public problems and solve them (part II).
- **Field research:** Civil servants will be given a few days to refine their analysis and validate the initial statements. The firm will provide guidance on the methodology to use and suggest suitable activities for the civil servants to improve their analysis, aligning with the content of the second training session.
- **Final online presentation:** During this second workshop, civil servants will present their refined problem definitions and will receive final feedback from the contractor.
- **Problem definition and Phase 1 outputs:** Finally, all civil servants and relevant stakeholders participating in the workshop and trainings from each city will:
 - vote on 3-5 problems to be the basis for the next steps of the multi-city challenge, facilitated by the contractor.
 - designate a group of problem owners, i.e., civil servants who will act as referees for the city in the rest of the challenge
 - define a communication strategy to be handed to the city, to ensure advertisement around the challenge. The contractor will provide a pro forma strategy that each city can adapt as needed.
- **Phase 2: Open innovation challenge to gather ideas.** The Challenge will leverage local and global expertise and invite any person (resident or non-resident), expert or organization to submit a proposal to address any problem defined in the previous phase. This will generate a pool of solutions aggregated on a common, open-source platform. The Challenge will invite participants to develop short proposals. Participants will submit proposed solutions in teams that will become the resident working team in the piloting phase:

- **A legitimate and democratic process to select ideas:** The problem owners and other civil servants and relevant stakeholders will be charged with prioritising the solutions they want to implement. This will include a shortlisting, evaluation, and selection – using tools developed by the firm.
 - **Phase 2 outputs** - two winning solutions will be selected per city. Cities will be responsible for advancing and implementing these solutions.
