A Proposal shall be rendered non-responsive at the technical evaluation stage if it fails to achieve the minimum technical score indicated

	<p>in the BDS. When necessary and if stated in the BDS, UNDP may invite technically responsive bidders for a presentation related to their technical proposals. The conditions for the presentation shall be provided in the bid document where required.</p> <p>30.2 In the second stage, only the Financial Proposals of those Bidders who achieve the minimum technical score will be opened for evaluation. The Financial Proposals corresponding to Technical Proposals that were rendered non-responsive shall remain unopened, and, in the case of manual submission, be returned to the Bidder unopened. ### Consultancy for Provisions of Technical Services for Development of Investments in climate resilience and access to renewable energy technologies

<b>Location:</b>	Wewak, Papua New Guinea (with travel to the Project Target Provinces and Port Moresby as and when required based on the needs).
<b>Type of contract:</b>	Professional Contract
<b>Project:</b>	Support to Rural Entrepreneurship, Investment and Trade (STREIT) in Papua New Guinea
<b>Languages Required:</b>	English
<b>Starting Date:</b>	15 <sup>th</sup> September 2020

#### Background

The Government of Papua New Guinea (PNG) aims to achieve 70% nationwide electrification in the country by 2030 and 100% by 2050 as outlined in the Development Strategic Plan (2010-2030). About 13% of PNG's total population has electricity mainly from the current grid services that the government provides. As such, the government has developed the National Electricity Roll-Out Plan (NEROP) to achieve government's target. To achieve this, the plan would require improved investment in energy development including renewable energy (RE) sources and energy efficiency (EE) technologies which will reduce reliance on fossil fuels as these contributes to greenhouse gas emissions which ultimately affect the global climate.

In this context the Government of Papua New Guinea, represented by the Department of National Planning and Monitoring, the United Nations Development Programme and in partnerships with the Food and Agriculture Organization of the United Nations (FAO) is providing technical assistance to improve access for renewable energy for rural communities under the European Union funded "Support to Rural Entrepreneurship, Investment and Trade in Papua New Guinea" (STREIT) Action .

STREIT's overall objective is to increase sustainable and inclusive economic development of rural areas. The Project will support investments in climate resilience and improved value chains by facilitating access to renewable energy technologies. It will deliver a range of activities under output 2.3 – Increased production of and access to, renewable energy systems. It will do this by delivering activities that:

- Support policy and regulatory reform which will among things, promote the inclusion of food and agriculture in renewable energy development.
- Determine the feasibility of investment options for renewable energy generation systems.
- Establish renewable energy generation systems in Project areas and advocate for their up-take.
- Support the generation of electricity generated from renewable sources installed.

UNDP is implementing the Project as part of its current portfolio of environment, energy and climate change projects. It will leverage off existing renewable sector activities and existing partnerships with key relevant players including the East Sepik Provincial Administration, PNG Power Limited, the Department of Petroleum and Energy, the Climate Change and Development Authority, the Independent Consumer and Competition Commission and other development partners. The Project will operate for four years.

## Objective

The objective of this consultancy is to support sustainable and inclusive economic development of rural areas in Papua New Guinea by increasing the use of renewable energy for selected end users in East and West Sepik provinces.

## Duties and Responsibilities

The team of experts will be expected to work closely with the UNDP STREIT Project Management Unit as well as other key Government stakeholders and United Nations agencies on daily basis to ensure the project activities are implemented in a consultative and coordinated manner.

In order to achieve the above objective, the following tasks will be completed:

**Inception meeting with the project team to clarify the terms of reference, expectations, deliverables and deadlines.** The results of this meeting will be documented in an inception report with an agreed workplan.

**Assessment of the feasibility of and investment options for renewable energy generation systems in East and West Sepik provinces.**

- Review existing national and provincial assessments and feasibilities completed on renewable energy generation options in Papua New Guinea.
- Consult with the provincial authorities in East and West Sepik as well as local stakeholders to prioritise types of renewable energy sources to be assessment for technical and financial viability.
- Conduct an assessment of the feasibility of and investment options for renewable energy generation systems (solar, hydro, or wind) depending on the outcomes of consultations. The assessment should include:
  - Determining the security, sustainability and connectivity at local levels in the STREIT programme area;
  - Cost-benefit analysis of different renewable options proposed;
  - Mapping of current and potential suppliers for necessary equipment both domestic and international; and,
  - Identify and propose a minimum of five public facilities to receive renewable energy installations based on an agreed criteria system.
- Identify investment options for project support and partnerships including EU-Blended financing.
- Conduct an assessment of possible financing options and assist in brokering opportunities for investment. This will look at among other things: micro-credit; affordable financing and public-private partnerships.
- Identify possible financing models to support renewable energy demonstrations among target beneficiaries. This will flow from the market assessment identified above.
- Convene a symposium and trade expo fare to advocate for innovative financing models and the uptake of prototype renewable technology solutions. The consultants will be responsible to provide a concept note on the proposed expo, identify and invite potential participants, organise, facilitate and document the event. UNDP will be responsible for organising the venue.

**Establish solar-based power generating systems in selected public facilities in East and West Sepik provinces.**

- Based on the sites proposed in the feasibility assessments, determine current infrastructure needs and energy requirements of each facility identified (a minimum of five facilities). Such facilities

could include the Sepik Institute of Rural Technology, Technical and Vocational Education Training centres (TVET), schools, health posts and hospitals.

- Conduct an assessment of suitable options for sites, technical specifications and hosts for the installation of solar power generating facilities.
- Conduct environmental impact assessments of potential pilot sites and public institutions.
- Determine baselines against which to measure user, peak-periods and energy efficiency.
- Develop and execute a stakeholder consultation plan to engage the public to determine requirements and expectations for solar power based renewable energy generating systems. This will also aim to raise awareness on the uses of renewable energy technologies.
- Design and provide a list of equipment required to be procured for the installation of the specified mini grid solar systems. The list of equipment should include a cost and advice on where to procure. It is required that the full cost of the installation of these model mini-grid solar power generation equipment be made available as part of the design package.
- Install the supplied mini-grid solar power generation equipment in the selected villages in West and East Sepiks.
- Develop operational and maintenance plans for each installation.
- Identify and train lead people on renewable energy installation on maintenance, operations and budgeting to ensure sustainability of the systems installed.
