## TERMS OF REFERENCE

*Developing Guideline on Gender Mainstreaming in Artisanal and Small-scale Gold Mining (ASGM) Sector (Penyusunan Buku Pedoman Pengarusutamaan Gender di Sektor Pertambangan Emas Skala Kecil)*

### I. Background Information

Worldwide Artisanal and Small-scale Gold Mining (ASGM) is the largest global source of anthropogenic mercury releases into the environment (35%). Mercury can travel long distances, contributing to global mercury pollution and contaminating the world's ecosystems and fisheries. Exposure to mercury may cause serious health problems, and it is a particular threat to the development of the child in utero and early in life. Phasing-out mercury from the ASGM sector is therefore of the utmost importance, however ASGM is a very important source of jobs and livelihoods. ASGM accounts for about 17-20% of the world's annual gold production with 15 million people directly participating in ASGM activities and another 100 million depending on ASGM for their livelihoods.

In Indonesia, in order to support Presidential Regulation Number 21 of 2019 on the National Action Plan for Reduction and Abolishment of Mercury Use. UNDP is implementing The Integrated Sound Management of Mercury in Indonesia's Artisanal and Small-scale Gold Mining (GOLD-ISMA) in cooperation with the Global Environment Facility (GEF) and the governments of Indonesia to eliminate mercury releases from the Indonesian Artisanal and Small-scale Gold Mining (ASGM) sector by i) Strengthening institutions and the policy/regulatory framework for mercury-free ASGM; ii) Increasing the access of mining communities to finance to enable the procurement of mercury-free processing technologies; iii) Increasing the capacity of mining communities for mercury-free ASGM through the provision of technical assistance, technology transfer and support for formalization; and, (iv) raising awareness and disseminating best practices and lessons-learned on mercury phase-out in the ASGM sector.

Gender perspective has incorporated in mining sector through the Minamata Convention on Mercury preamble notes awareness of, *"health concerns, especially in developing countries, resulting from exposure to mercury of vulnerable populations, especially women, children, and through them future generations"*. In addition, the National Action Plans to address artisanal and small-scale gold mining have mandated to include, *"Strategies to prevent the exposure of vulnerable populations, particularly children and women of childbearing age, especially pregnant women, to mercury used in artisanal and small-scale gold mining"*<sup>10</sup>.

The Minamata Convention on Mercury is a global treaty to protect human health and the environment from the adverse effects of mercury. Mercury is a chemical of global concern owing to its long-range atmospheric transport, its persistence in the environment once anthropogenically introduced, its ability to bioaccumulate in ecosystems and its significant negative effects on human health and the environment. Although chemicals pose a risk to all human beings, especially if not properly managed, they affect women and men differently. For instance, due to biological differences their higher proportion of body fat, women store more environmental pollutants than men in their tissues and are hence more vulnerable to the adverse impacts of fat-soluble chemicals. Women's exposure to chemicals can cause reproductive health problems such as birth defects, low birth weight,

<sup>10</sup> Minamata Convention on Mercury 2017

[http://www.mercuryconvention.org/Portals/11/documents/Booklets/Minamata%20Convention%20on%20Mercury\\_booklet\\_English.pdf](http://www.mercuryconvention.org/Portals/11/documents/Booklets/Minamata%20Convention%20on%20Mercury_booklet_English.pdf)

miscarriages or premature births, and a significant part of the chemical burden experienced by mothers can be passed on to their babies during gestation and breastfeeding.<sup>11</sup>

UNDP places gender mainstreaming as one of important elements of GOLD ISMIA to ensure project intervention will benefit equally to all people, men and women. The project has identified the occurrence of gender problems at ASGM and will attempt to help to address it. Moreover, project will look for opportunities to strengthen the sustainability of mercury free ASGM and a better livelihood especially for the ASGM miners. In particular, the Project will support six (6) ASGM communities in Indonesia to reduce mercury use at least 5 metric tonnes/year starting in year three (3) of the project, which over the life-span of the project will result in a mercury release reduction of at least 15 tonnes. The 6 ASGM communities are as follows:

1. Kecamatan Kokap, Kabupaten Kulon Progo, Provinsi Daerah Istimewa Yogyakarta;
2. Kecamatan Sekotong, Kabupaten Lombok Barat, Provinsi Nusa Tenggara Barat;
3. Kecamatan Sumalata Timur, Kabupaten Gorontalo Utara, Provinsi Gorontalo;
4. Kecamatan Dimembe, Kabupaten Minahasa Utara, Provinsi Sulawesi Utara;
5. Kecamatan Singigi, Kabupaten Kuantan Singingi, Provinsi Riau;
6. Kecamatan Obi, Kabupaten Halmahera Selatan, Provinsi Maluku Utara.

Gender inequality in ASGM showed when women are not often identified as miners. Women's roles in ASGM vary within mining site, depending on the proximity to villages or homes and the gold being mined. Because of their traditional role as transporters and processors of materials, women involvement is often invisible as they are usually found in the household, therefore there may be a significant discrepancy between the estimated and actual numbers of women involved in the ASGM.

GOLD ISMIA has reviewed thirteen (13) policies and regulations including the gap analysis on gender mainstreaming aspects. The study found that the current regulation and policy on gender mainstreaming in ASGM does not exist. As UNDP programs promote gender equality by ensuring that women and men can equally access, participate and benefit from development projects, GOLD ISMIA project also highlights gender mainstreaming as an important feature, and recognizes that there is a need to develop a guideline to mainstream gender in ASGM sector to implement Minamata convention obligations and to support Presidential Regulation Number 21 of 2019 on the National Action Plan for Reduction and Abolishment of Mercury Use.

In this context, UNDP will engage third parties to develop a guideline on gender mainstreaming in ASGM sector. This organization is expected to provide and develop technical assistance on gender mainstreaming strategies, including the formulation of practical action, gender sensitive indicators for monitoring and evaluation within the whole programme formulation and implementation cycle, gender analysis and gender impact assessments. This particular activity will contribute to the delivery of project output 1.2.3: *15 policies, regulations and guideline revised or developed while mainstreamed gender dimensions to improve the enabling environment for formalization and mercury phase-out in the ASGM sector.*
