LTA for emergency intervention works at Cultural Heritage Sites

Bidders Questions and Answers

No	Question	Answer
1	Chemical Sanitary Item unit should be corrected as per day? Otherwise, we need to know the duration?	The portable chemical sanitary item unit has been changed to “per day” assuming 60 days per site for 10 sites; 600 days and revised BoQ is uploaded in the system.
2	The capacity of the generator? How many kWA and duration? What is meant by 10 items? Does it mean 10 No's of generators to be purchased or hired? Should we consider that generators might be needed within the same time frame?	Each item describes 1 site; 10 generators are for 10 different sites Capacity of the generator depends on the need of power that the site may need for the works and for the site facility At any given time not more than 2 sites are expected to be intervened
3	In the Item No. 1.2 what is meant by Hard Plastic fence? We need to know the duration of each work item for a better pricing? Do we need to estimate the quantity of 150 m of fencing to be needed in one go?	Fencing is not time related; length is given for a unit rate of fencing. It means no chain-link or iron fence
4	Could you please clarify how long the scaffolding to be kept in place? Do we have to consider purchase of scaffolding 4 x 400 m2 = 1600 m2 because works can clash and might need to be implemented at the same time.	Scaffolding will be required as long as the work item requires scaffolding. We assume contractors have scaffolds available – no need to purchase 1600m2 scaffolds
5	We need photos of cornices to be able to judge the condition and price?	We do not know which sites will need emergency interventions
6	We need to have the photos of roofs for a better pricing?	We do not know which sites will need emergency interventions
7	Could you please specify the length and cross-sectional dimensions of tie beams?	We do not know which sites will need emergency interventions
8	In the Item No. 2.13, what is the height of the prop? How many props will be installed in 1 m2?	Please refer to Specifications 2.13 and please note that the sites are not known
9	In Item 2.14 the size of the openings is important to know before pricing?	We do not know which sites will need emergency interventions
10	Item 2.16 - Should we consider this item to be implemented in 10 different location?	M2 unit price to be given for this work item and yes the total quantity is assumed to be sufficient for the 10 sites
