## SPECIFICATION

### on the unmanned aerial vehicles for photography and videography for the State Emergency Services in Donetsk and Luhansk oblasts

#### 1. Context

The United Nations Development Programme (UNDP) has been active and present in eastern Ukraine for the past decade, prior to the conflict, with a focus on community development, civil society development, and environmental protection. Work on addressing the specific conflict-related development challenges built on this earlier engagement, established partnerships, and started in 2015 through the United Nations Recovery and Peacebuilding Programme (UN RPP). The UN RPP is a multi-donor funded framework programme formulated and led by the UNDP in collaboration with the Government of Ukraine and in cooperation with a number of partnering UN agencies (UN Women, FAO, UNFPA). The RPP was designed to respond to, and mitigate, the causes and effects of the conflict in the east of Ukraine. It is an integral component of the UNDP Country Programme and is therefore fully aligned with the United Nations Partnership Framework (UNPF).

In October 2018, four UN agencies (UNDP, UN Women, FAO and the UNFPA) have countersigned a new joint project document, funded by the EU. The overall objective of the project is to restore effective governance, support economic recovery and promote reconciliation in the crisis-affected communities of Donetsk, Luhansk and Zaporizhzhya oblasts in Ukraine, thereby enhancing the credibility and legitimacy of local governments in the government-controlled areas of the regions. It will contribute to peacebuilding and prevent further escalation of the conflict in Ukraine through effective and accountable decentralization, gender-responsive recovery planning and equal access to services, as well as enhanced economic recovery and development.

Component III of RPP “Community Security and Social Cohesion” aims, among other, on strengthening community security and social cohesion through testing innovative legal aid, access to justice, conflict resolution and peacebuilding mechanisms at local level.

State Emergency Service as one of the main security providers is responsible for ensuring timely response to emergencies, their elimination and prevention. To conduct aerial reconnaissance of fires, survey of territories and waters for the presence of explosive objects, search for missing people, both in the forest and at sea, SES units require appropriate technical equipment.

So, quite recently a special division of aerial reconnaissance which carries out the above-stated functions was established in the SES of Donetsk oblast. This unit was involved in responding to nationwide emergencies that took place in various regions of Ukraine. Only this year, this unit participated in the elimination of emergencies in the ecosystems of Kherson and Luhansk oblasts, the Chernobyl zone, where it showed extraordinary efficiency and important results of its work to eliminate the consequences of emergencies.

In the Donetsk and Kherson oblast, this aerial reconnaissance unit mainly carries out non-technical inspections for the detecting explosive objects in the waters of the Azov Sea and its coast, as well as is involved in rescue operations at sea.

At the same time, it should be noted that the existing technical equipment of the air reconnaissance unit needs to be improved and re-equipped, as the unmanned aerial vehicles used by the unit are very sensitive to weather conditions and often fail.

With regard to the air reconnaissance unit established in the SES of Luhansk oblast, it should be noted that its equipment does not yet allow to operate at full capacity, as its technical capacity is at a fairly low level and is not equipped with the necessary unmanned aerial vehicles for photography and videography. That is why an air reconnaissance unit of Donetsk SES was involved in the elimination of large-scale fires in Luhansk oblast, which took place in 2020.

Given the above, it is possible to state the fact that air reconnaissance units in Donetsk and Luhansk oblasts are in dire need of new unmanned aircraft models, which are designed specifically for emergency services, and which are able to operate at low temperatures, during strong gusts of wind, rain, snow, storm, fog, at night and in conditions of heavy smoke. It is expected that equipping these units with new unmanned aerial vehicles will significantly improve their efficiency and save many lives.

Thus, motivating the urgent need to strengthen the technical capacity of air reconnaissance units, the senior leadership of SES in Donetsk and Luhansk oblasts requested UNDP to provide international technical assistance in the form of the purchase of **two unmanned aerial vehicles for photography and videography**.
