ANNEX 1: SCHEDULE OF REQUIREMENTS

Terms of Reference

Within the framework of the third phase of ENPARD (ENPARD III), UNDP Georgia is implementing the project “Improving Rural Development in Georgia” (IRDG). The project contributes to improved governance in rural development, rural economic diversification and environment protection.

One of the objectives of the IRDG project is to improve energy efficiency (EE) and enhance the application of renewable energies (RE) in rural households and business. To achieve this objective, direct financial support and incentives will be provided to local households and businesses to undertake energy efficiency improvements and increase the use of renewable energy sources.

Georgian Technical University (GTU) has already identified EE/RE technology packages which will be offered to households. Based on GTU recommendations 4 EE/RE technologies were chosen as suitable by IRDG project. Those selected technologies are: Insulation, Industrial Solar Water Heater and Simple Solar Water and Solar Air Heaters.

Based on the original designs developed and approved by GTU and due to the fact that Simple Solar Air Heaters are not available on local market, IRDG project hired a civil engineer who further elaborated suitable drawings for the prototypes.

The test of Two Solar Air Heaters need to be conducted by a reputable and knowledgeable laboratory.

UNDP wishes to obtain quotations from qualified contractors with experience on Laboratory Testing of Solar Air Heaters or similar devices.

Upon signing of the contract, the prototypes will be posted to the contractor by UNDP Georgia. After the test, the contractor shall deliver the prototypes at own cost on the following address: 3 Arakishvili street, first dead end, Tbilisi, Georgia.

The following tasks are to be performed:

- 1) Laboratory testing of 2 Solar Air Heaters The Laboratory tests should cover at least, but not be limited to, the following key parameters: **visual inspection, thermal performance testing, exposure test, rain penetration, freeze resistance, internal pressure test, rupture or collapse test (proposal: only for internal hoses), final inspection.**
- 2) Check and document the technical capacities of each prototype. Include especially data related to each prototype’s efficiency, using as much as possible conditions that resemble those in rural areas of Georgia (climate zone II and III – see attachment #4).

The technical Details of Solar Air Heaters:

1. SAH with Aluminium foil duct pipe 90 mm, absorber area 1.15 m²
