PROJECT TITLE: European Union Confidence Building Measures V Programme (EU-CBM V)

1) BACKGROUND

In 2019 the European Union launched the fifth phase of the Confidence Building Measures Programme (EU-CBM V), funded by the European Union and implemented by the UNDP Moldova. The overall goal of the Program is to increase confidence between both banks of the Nistru River by ensuring socio-economic development through involvement of local authorities, civil society organizations, private actors, and other community stakeholders. The EU CBM Programme is focused on 4 specific fields: promoting business development; support to community development and cross river platforms of cooperation; preserving cultural and historical heritage and assistance to media development and cooperation.

Transformative force for social transformation on both banks - the activities under this component will provide support to the cultural sector with a focus on historical heritage with a view to investing in the country's future and facilitating development and conflict settlement.

Cultural and Historical heritage component focuses on conservation-restoration of historical monuments of national importance and on conservation-restoration of smaller scaled historical heritage endangered projects, which are considered to have a national interest for both banks (Confidence building measures dimension).

Two Flagship projects to undergo conservation-restoration under EU-CBM Programme are: Bender Fortress located in Transnistrian region and Chisinau Circus located in capital of Moldova.

The Circus building from Chisinau was officially commissioned in 1981. The first performance in the Circus building was held on April 25, 1982. The design documentation for the respective building was developed by the State Design Institute MOLDGIPOSTROI (currently the National Research and Design Institute "Urbanproiect"). The authors' team has been awarded the State Award for Architecture for carrying out the respective project.

The Circus building has a performance hall in the form of an amphitheatre for 1900 seats, and the central arena is in the form of a circle with a diameter of 13 meters. The performance hall is surrounded by a semicircle lobby, which is decorated with encaustic wall paintings; the lobby floor is made of marble mosaic representing tumbling animals. The main façade is enriched with an obelisk representing a clown.

The Circus building complex from Chisinau is composed of 6 buildings, delimited among themselves through seismic and trampling joints:

Bloc A, the building with the main arena

Bloc B, gallery-type building for access from Bloc A to Bloc C

Bloc C, the building with the small arena.

Blocs D, E, F – buildings for administrative-housework purposes.

In 2004 the Circus building stopped its activity in order to undertake reparation and renovation works, but the given works were not finished, hence the building is not yet operational.

On May 30, 2014, as a result of current reparation works, the small arena of the Circus, bloc C, became operational again, having 300 seats and a diameter of 9 meters.

In 2019 the EU-CBM Programme has contracted a company to carry out a technical expertise of the block A of the Circus complex and as a result, it was found that bloc A has a limited technical operational condition and it is necessary to perform a number of works to reinforce and restore the load-bearing constructions so as to get the building back into an operational technical condition.

In 2020, Eu CBM contracted a design company to develop the detailed technical design documentation for rehabilitation of block A of the Chisinau Circus. In 2021, EU CBM contracted an Italian technical design joint venture to prepare detailed design documentation for rehabilitation of block A of the Chisinau Circus.

Based on it and taking in to account the limited budget, the detailed design documentation included several phases of rehabilitation and EU-CBM programme is going to implement the phase one.

Even though the Chisinau Circus is not introduced into the list of cultural heritage objects, protected by the Moldovan laws, the building contains several cultural heritage elements which are in the list for cultural heritage objects. Therefore, the attitude toward the works shall consider the cultural heritage objects in place.

1. SCOPE OF WORKS

EU-CBM Program is looking for a company/consortium with demonstrated experience in the field of rehabilitation of large-scale social and cultural buildings in Moldova and outside the country to carry out the «Rehabilitation works of Chisianu Circus (first phase)» that includes:

- Restoration of the dome roof and ensuring its safety, as the current condition is poor due to the numerous and consistent infiltrations of rainwater inside the building. Given that the terrace roof slope (relief + 14.50) is currently oriented towards the interior of the building, it is mandatory to change its slope orientation towards the perimeter of the building, thus intercepting the water leaks that are provided within the "V" -shaped perimeter structures. Given the available funds, the remaining duties involve works on both the parts of the façade and the parts of the foyer from the relief - 4.50.
- Intervention on the facade includes:
 - reconstruction / restoration of "V" -shaped structures, that are closely linked with the new rainwater drainage system, because lowering pipes are located inside these structures and reach the lower levels.
 - restoring the elements on the wall at the porch on the ground floor.
 - restoration / reconstruction of placed blown glass windows on coronation.
 -

More detailed description of the works can be founded in Detailed technical Design documentation and in explanation reports.

The selected vendor will be responsible for all the maintenance activities of the construction site, including the evacuation of garbage after demolition works, fence of the working area, temporary storage locations, supervision of the site during the implementation period etc.

The selected company shall ensure that the health and safety measures are implemented in accordance with local norms and the health and safety engineer is permanently on the construction site. All the health and safety panels, antifire panels and indicators are in place and the staff is well equipped with individual health and safety equipment/garment etc.
