

RFQ/UNDP/TT/01/2022 Trans-critical CO2 Training Equipment

Clarification Questions Received via procurement.tt@undp.org

Question 1

Regarding the process mentioned in the subject, the following post-sale services are requested: on-site installing, commissioning and training. I would like to submit the following questions about the required training: the supplier is required to provide training activities, however, it is indicated that these activities will be facilitated by the National Ozone Unit of Trinidad & Tobago.

Could you explain more about this, as I do not understand how this training service would be provided?

Answer 1

While the training is to be provided by the supplier of the equipment, the National Ozone Unit will act as the liaising entity through which the recipients of the equipment and the equipment suppliers communicate for this.
