

## RFQ/UNDP/TT/01/2022 Trans-critical CO2 Training Equipment

Clarification Questions Received via [procurement.tt@undp.org](mailto:procurement.tt@undp.org)

### Question 2

Could you explain more about this, as I do not understand how this training service would be provided? The capacity of the goods to be delivered and installed is small, therefore, **we would like to know their intended use in order to understand their application and submit an offer that meets your needs.**

The requests for clarifications made are shared in a document to all interested bidders. Is it possible to have this document?

### Answer 2

The purpose of the equipment is to introduce the technologies locally to the RAC sector via training and demonstration activities. This will be done by installing the units at two key educational institutions locally to give technicians and industry professionals the opportunity to learn about the technologies.

The clarification questions and answers are posted on the website.
