RFQ/021/22 - Pulses Processing Line (mung beans, kidney beans, chickpeas, sesame seeds)

Questions and answers

1. for 1st Air-screen Cleaner, the cleaner is normally 4 sieve layers which same as the photo of the cleaner. 
but on the required number of sieves, it just remarked for green mung bean 2.75mm and 3mm, that means the cleaner will install with 2 sieve layers, am I right? 
but to clean sesame and millet, it only showed 1.5mm, is it 1 sieve layer? or maybe share sieves with other grains?

ANSWER: Yes, it is required that the Air Screen Cleaner must be with 4 sieve layers. This will affect the quality of the product. The machine will clean big, small, light impurities and good grains will be sorted as well. In the RFQ it is meant that necessary number of spare sieves (required number) should be supplied along with the machine so that green mung beans of 2.75 and 3 mm, kidney beans and chickpeas of 5 and 6 mm, sesame seeds of 1.5 mm could be sorted out. The user will change the sieves based on his needs.

2. For Destoner and Gravity Separator, normally if you process kidney bean, chickpea, and green mung beans use bigger mesh, while to process sesame and millet use smaller mesh. 
(because if sesame and millet use bigger mesh they may fall through the mesh holes. and for beans if you use smaller mesh, the air volume may not be enough, because the air blows upward through the mesh.) 
but in your list I didn’t see the extra table with different mesh size. 
for better sorting results, we would suggest you have an extra table with different mesh. but if you don’t have that budget in this tender, we can install with smaller mesh to process all those grains.

ANSWER: As you mentioned, the processing of sesame seeds requires extra table with different mesh. 
In addition, according to the end user for him the priority is green mung bean, kidney bean and chickpea. 
Taking this into account sesame seeds may not be considered.

3. About transportation, we can deliver the machines to Samarkand train station, can you arrange to pick up the machines from Samarkand and delivery to Shakhrisabz?

ANSWER: No, the delivery must be made to exact location listed in the RFQ: Shakhrisabz city, Kashkadarya region, Republic of Uzbekistan.

4. About installation, the machines in the list are simple machines which is easy for installation and training. are the final user able to install by themself?
we can provide online installation video and online service to help them install the machines and training them.

ANSWER: If this is the case, please, provide your option in the offer.

5. The most important is payment terms, we can not accept payment in 100% post-payment upon delivery of equipment.
our payment terms is 30%TT in deposit, balance 70%TT before shipment. 
may I know is the 100% post-payment is a prerequisite condition for attending this tender? or it can be changed?

ANSWER: Yes, the payment terms can not be amended and it is 100% postpayment after delivery and installation.
