Evaluation and comparison of proposals

A two-stage procedure is utilized in evaluating the proposals, with evaluation of the technical proposal being completed prior to any price proposal being opened and compared. The price proposals will be opened only for submissions that passed the **minimum technical score of 70% (or 490 points)** of the obtainable score of **700 points** in the evaluation of the technical proposals.

In the First Stage, the technical proposal is evaluated on the basis of its responsiveness to the Terms of Reference (TOR) and as per below Evaluation Criteria.

In the Second Stage, the price proposals of all offerors, who have attained minimum 70% score in the technical evaluation, will be reviewed.

Overall evaluation will be completed in accordance with cumulative analysis scheme, under which the technical and financial aspects will have pre-assigned weights on 70% and 30% of the overall score respectively. The lowest cost financial proposal (out of technically compliant) will be selected as a baseline and allocated the **maximum number of points obtainable for financial part (i.e. 300)**. All other financial proposals will receive a number of points inversely proportional to their quoted price; e.g. 300 points x lowest price / quoted price.

The winning proposal will be the one with the highest number of points after the points obtained in both technical and financial evaluations, respectively, are added up. The contract will be awarded to the bidder that submitted the winning proposal.

1. BACKGROUND

Ukraine has made significant strides in digitalizing the state and its functions. Successes of the Prozorro system, implementation of the national interoperability system for state registries (Trembita), increasing the transparency of public sector through the open-data initiative, development of digital public services under "My State in My Smartphone" initiative are well-known and documented. The Ministry of Digital Transformation (MDT) created in 2019 aims to continue and expand this trend. Most recently, the Government-launched the "Diia.gov.ua" e-services delivery web-portal and its namesake mobile application. These digital products embody the newest trends of digitalization for citizens.

With support from its partners, MDT aims to rapidly develop new and improved e-services that will offer an enjoyable and secure experience. Recently Ukraine saw the development and implementation of several high-profile e-services in different spheres – business registration, construction, birth related services (eMalyatko), and others. At the very end of 2020, MDT launched a mechanism for individual entrepreneurs to apply for state support in the most battered economic sectors. eService expansion, especially throughout the COVID-19 pandemic, helps citizens get no-contact access to governmental services. Such services also cut state administrative costs, bringing about more transparency into government-citizen interactions and slashing petty corruption.

Yet, rapid development of eServices poses a new challenge – widening the digital divide, that can marginalize people with disabilities, elderly, economically disenfranchised, those living in areas without internet access. With this in mind, UNDP started its new project - Digital, Inclusive, Accessible: Support to Digitalization of State Services in Ukraine (DIA Support) Project, that aims to support e-service development rooted in the Human Rights Based Approach (HRBA).

A socio-economic context analysis helps determine general priorities for choosing specific populations that need digital solutions adapted to their needs and capabilities. For example, retired women who have the status of internally displaced persons (IDPs) and live-in extreme poverty suffer multiple vulnerabilities. According to the UN, in 2017, about 1.5 million IDPs were registered in Ukraine, with two-thirds of them being the elderly, and predominantly women. In rural areas, 48 percent of women lack access to adequate health care, 36 percent of women did not participate in decision-making in their communities, and 67 percent did not have access to broadband Internet at home.

In the Ukrainian context, groups that often fall through the cracks include women and men living below the poverty line; the elderly; women and men with different types of disabilities; women living in rural areas; young people living in conflict-affected areas; ethnic minorities (particularly the Roma) and the IDPs. Veterans returning to civilian life are another group in focus. Appropriate digital solutions for these target groups are likely to differ from the models that are suitable for large-city dwellers or those with a medium or above-medium income and round-the-clock access to quality Internet.

During first year of work DIA Support Project took part in implementation of number of e-services for vulnerable groups in partnership with the MDT on the "Diia.gov.ua" portal. Among implemented e-services are housing subsidies, allocation and recalculation of pension and additional 4 pension services and two services for IDPs.

During the first six days since the beginning of the invasion, as estimated by the Government of Ukraine, as many as 4,000,000 people have fled Ukraine, and a lot more people were internally displaced due bombing and shelling all over the country. This leads to unfolding humanitarian crisis and the MDT, as well as other government institutions and partners, plan to act rapidly and implement e-services, that should help address the consequences of this crisis and people's priority needs.

The MDT uses "mobile first" principle in e-services implementation, including urgent e-services related to crisis like IDP registration and "ePidrymka" monetary assistance. Taking this to the account, the MDT approached DIA Support Project with request to support further software development of the Diia mobile application. The Diia mobile application is popular and easy to use with more than 15 million user base. Currently, the list of e-services that have to be implemented is not identified yet, so to support the MDT request mentioned above, The Long-Term Agreement (LTA) modality will be used - mutual agreement with the supplier/s to provide the UNDP with team of specialists for implementation of software development tasks over a specific period with fixed daily fees of specialists involved. Customization and tailor made specific of each e-service, due to different business processes and information exchange procedures and parties involved, doesn't allow to fix prices for each task, value for money principle should rather be preserved through the secondary competition of qualified suppliers.

2. MAIN OBJECTIVE OF THE ASSIGNMENT

The main objective of the assignment, to be completed by a highly qualified vendor of software development services, is to **provide team of IT specialists for mobile application software development** according to requests for expansion of the functionality of the already operational "Diia" mobile application. For each request a specification and/or business process scheme/description approved by the MDT will be provided by the UNDP.

3. SCOPE OF WORK AND EXPECTED OUTPUTS

The provided software development teams of selected vendors (at least 2 (two)) will work with the MDT and "Diia" SOE to expand the functionality of the "Diia" mobile application. The MDT will provide approved business process scheme or description regarding each e-service required, based on which UNDP will create a service request to LTA holders, selecting the implementation vendor based on the secondary competition results. The "Diia" SOE will organize access required for software development of updates for the "Diia" mobile application.

The main technologies that will be used:

- **Backend:** Node.js, MongoDB, PostgreSQL, TypeScript, Docker.
- **iOS:** Swift 5, ReactiveKit, UIKit, Autolayout, Alamofire, Firebase.
- **Android:** Kotlin, Jetpack (ViewModel, LiveData, Lifecycles, Room etc.), Dagger 2, Coroutines.

In general, the purpose of e-services to be required is to ensure ability for user to:

- Authenticate themselves to enter the Diia mobile application (already available);
- Choose appropriate service on "services" tab;
- Access the relevant form for the service (**to be designed by the vendor**);
- Throughout the application process, get verified against other state databases and get data from them for filling in the application (**API secure data exchange and verification confirmation to be designed by the vendor**);
- Securely submit the application, through the "Diia" mobile application to the corresponding system for further processing (**channel and algorithms for transfer of application data to be designed by the vendor; once the data is successfully submitted, processing on the is complete**);
- Receive a notification in the "Diia" mobile application regarding the progress of the application and resulting documents (if applicable).

The following functionalities should be available for the end-users of the expanded "Diia" mobile application both on the client and government side:

1. **Citizen-clients** – citizens of Ukraine (18 years of age and older) are able to fill out, sign and submit an application for newly created e-services via "Diia" mobile application.
2. **Relevant government organizations** – receive the information provided by citizen-clients in their applications, process this information in their own IT system, inform citizen-clients on processing results via "Diia" mobile application.

The "Diia" mobile application expended functionality may also include implementation of new digital documents.

Apart from designing the application forms for users, the vendor will be responsible for creating a duly secured data exchange channel to transfer relevant applications to the corresponding systems and implementing data exchange with other state registers for automatic filling of applications.

The data exchange connections should be implemented on behalf of the "Diia" mobile application to implement service provision. The "Trembita" data exchange system shall be used as a secure transport for data exchange if relevant systems have established connection via "Trembita".

The data input fields in all service forms must have appropriate checks of format and logic. The back-end of the “Diia” mobile application has to gather service use statistics and feedback statistics (including age and gender disaggregation).

The contractor has to provide warranty for the developed software at least 12 months after acceptance of the last deliverable.

Neither UNDP nor the vendor shall be held accountable for producing necessary documentation in the area of information protection or as related to complex systems of information protection. Intellectual property rights to the software code shall be transferred to relevant state agencies, and neither UNDP nor the vendor shall be held liable for deployment, upkeep, proper and legal operation of the systems.

Requirements for accessibility

All elements as displayed to the users of the “Diia” mobile application should be accessible to persons with disabilities.

4. MONITORING / REPORTING REQUIREMENTS:

The Contractor shall report to the DIA Support Senior IT Specialist. The Quality Assurance team consisting of DIA Support Project manager, DIA Support Senior IT Specialist, representatives from Ministry of digital transformation of Ukraine and/or SE “Diia” (by agreement) perform acceptance testing and review of work results.

The payments shall be arranged upon completion, presentation, Quality Assurance Team acceptance and UNDP approval of the team work results ***in accordance to daily fees and work time of the software development teams.***

All documents should be transmitted to UNDP electronically (formats of *.docx, *.xlsx, *.pptx, *.pdf or other commonly used formats) in the Ukrainian language. UNDP will provide payments upon provision of deliverables duly certified by UNDP and approved by the MDT or “Diia” SoE.
