| **4.** Are there trays in the local market of these dimensions, and in white color, and the required number cannot be manufactured. There are no trays in this space without an inner frame, which is simplified to support the size of the tray and the possibility of carrying it without folding or lying down. The number of trays were supplied in brown color and supported in their inner frame and we did not see any problems or obstacles in the work?  

هل يوجد في السوق المحلية صواني بهذه الابعاد وبلون الأبيض، والعدد المطلوب لا يمكن تصنيعه يكون العدد قليل ولا يوجد صواني بهذه المساحة بدون إطار داخلي بسط لدعم حجم الصناديق وأمكانيتها حملها بدون انعطافها أو كسرها. وقد قمنا بتوريد عدد من الصواني بلون بني ومدعمة في إطارها الداخلي ولم نلمس أي مشاكل أو عواقب في العمل؟  

The required color is exclusively white, and the supplier can search in several sources of supply, since the required is present. We apologize for the mentioned brown color, and the supplier mentions in his offer the type presented and the priority is inevitably for the requested.  

اللون المطلوب حضاً أبيض ويمكن للمورد البحث في عدة مصادر للتوريد كون المطلوب موجود وتعتبر عن اللون البني المذكور وذكرت المورد في عرضه النوع المقدم والأولوية حتما للمطلوب. | **Q.** Is the water pump sufficient and provides good watering, do we need to roughly double it?  

هل مضخة المياه كافية و تحقق أي سقاية جيدة تحتاج إلى مضاعفتها تقريباً؟  

It was studied by an expert in irrigation and cultivation. There is no study in which "almost" is mentioned.  

تمت دراستها من خبر في الري والاستنبات. ولا يوجد دراسة يذكر فيها تقريباً. |  

**6.** Placing the tank at the bottom of the cart is not feasible, and it was suggested to us by the Quneitra Committee, and we made it clear that it is illogical and not executable. The required size cannot be hung on the |
bottom of the cart because its space is large. There is no tank that can be fully extended on the bottom of the cart due to the required thickness without disturbing the cart by walking, the tank must be inside the cart so that the water temperature is close to the barley temperature inside the cart, especially during the summer so not cause problems for the crop and placing the tank at the bottom of the cart requires that the pump be outside the cart to draw water In addition to weakening the pumping of water and the insecurity of being outside, and it will require puncturing the cart and inserting pipes inside it, and this greatly weakens the insulation of the cart. We suggest installing two tanks with a capacity of 500 liters inside the cart and lifting it on a base and put a pump of half horsepower for each tank and planting destination and separating it with different electrical circuits for each pump in the case of a desire to farm on one side of the cart and sterilize the other end or maintain it.

The tank is outside the cart so that it does not take up the inner cart space and the work space.

In all cases, the cart will be in a shaded place, as the temperature will not vary much, and it is preferable to irrigate at room temperature and not at a lower temperature.

It can be divided into two tanks, but with one pump and shut off point for each tank to keep the cost.

The number of panels is never enough to operate the cart, and it needs a much larger number and the number of batteries is also insufficient and needs to double the number and increase the capacity. In the case this is not achieved, the failure of the project during the summer period is inevitable if the electricity situation continues as current.

A. The number of panels is never enough to operate the cart, and it needs a much larger number and the number of batteries is also insufficient and needs to double the number and increase the capacity. In the case this is not achieved, the failure of the project during the summer period is inevitable if the electricity situation continues as current.
A. عدد الألواح غير كافي لتشغيل العربة ابدا ويتطلب لا عدد أكبر بكثير عدد البطاريات غير كافي أيضا ويحتاج إلى مضاعفة العدد ورفع السعة وفي حال عدم تحقيق ذلك فشل مشروع الاستدامة في فترة الصيف أمر محتمل في حال استمرار وضع الكهرباء على الشكل الحالي

It was studied by an electrical engineer, and that is what required.

تم دراستها من مهندس كهربائي، وهي المطلوبة

Q. There is no feeding unit that contains two separate screens, but there is one screen for the control panel of the entire cart, and there is a display screen for the inverter itself

لا يوجد وحدة تغذية تحوي ساعتين منفصلتين بل يوجد شاشة واحدة للوحدة تحكم بكامل العربة ويكون هناك شاشة عرض للانفرتر نفسه

A. It is important to secure temperature control and inverter capacity

المهم أن تتضمن التحكم بالحرارة واستطاعة الانفرتر

Q. It is useless and it is very difficult to put all the savings, chargers and inverters in the box. The best and most accurate solution is to put all things in the service room of the cart and connect it through a cable and a feed socket placed next to the main feed socket placed at the bottom of the cart’s control panel. It is connected when the cart is installed in the new place and note that the cart cannot function without a service room for soaking, washing and packing items. These parts are transported with the cart if it is being transported.

من غير المجدي ومن الصعب جدا وضع جميع المدخرات والشواحن والانفرتر في صندوق الحل الامثل والأكتر دقة وهو وضع جميع الأدوات في غرفة الخدمة الخاصة بالعربية ووصلها عن طريق كابل وفيش تغذية يوضع بجانب فيش التغذية الرئيسي يوضع اسفل لوحة تحكم العربية يوصل عند نصب العربية في المكان الجديد مع العلم أنه لا يمكن أن تعمل العربية بدون وجود غرفة خدمة لتقع والغسيل ووضيب الأغراض ويتم نقل هذه القطع مع العربية في حال نقلها

A. The important thing is to be gathered in one place and that the connections are hidden and not spread.

المهم متجمعة ضمن مكان واحد وتوصلات مخفية وليس منتشرة.

Q. Where will the hydraulic legs disappear while they are in the body of the cart, this is not possible because the leg's length does not allow it to enter the cart. In addition to the insufficient number of legs, you need at least 6 legs, preferably 8, two on each end of the cart, also, its work in a hydraulic way is not possible, so the best solution is to install and detach needed feet manually and that are removed completely when walking?

حول موضوع الارجل الهيدروليكية اولا اين سوف تخفي الأرجل أثناء انها في جسم العربية ؟ وهذا غير ممكن لأن طول القدم لا يسمح له بالدخول الى قلب العربية. وأضف الى عدد الأرجل غير كافي تحتاج الى 6 أرجل على
Hydraulic is easier to operate, and durable. The required legs are 4 in appropriate thicknesses and appropriately distributed for weight.

All other terms and conditions remain unchanged
