Section 5. Terms of Reference

Terms of Reference (TOR) **Medical Oxygen/Air Piping Services for** **Juba Teaching Hospital, South Sudan**

Request for Proposals	Provision for medical oxygen/air piping system for Juba Teaching Hospital, South Sudan
Program Unit	UNDP Global Fund Project
Duration	3 months
Starting Date	September 2022
Expected Ending Date	November 2022
Coverage	Juba Teaching Hospital
Project Title	Medical Oxygen/Air piping of Juba Teaching Hospital, Global Fund Project

1. Background

The Global Fund has been at the forefront in the response to the COVID-19 pandemic in South Sudan ensuring that the national Strategic Preparedness and Response Plan (SPRP) is adequately supported. The results achieved thus far in the national response are attributed to the partnership between the Global Fund and the partners in-country where resources have been timely mobilized and project interventions executed. The COVID-19 situation in South Sudan has been evolving over the last two years as indicated below:

Since the first COVID-19 case was confirmed in South Sudan on 5 April 2020, South Sudan experienced three waves - one in each year. Because of limited testing and weak surveillance, as of June 2022, only a little over 17,000 confirmed COVID-19 cases including 138 deaths have been reported in South Sudan since the start of the pandemic.

A household sero-prevalence survey conducted in Juba during August and September 2020 estimated that 38.5% of participants had antibodies for SARS-CoV-2, confirming COVID-19 had spread extensively within Juba. A health facility prevalence survey conducted in 7 locations throughout the country during December 2021 and February 2022 shows an overall positivity of 18.7% among participants. Both surveys confirm significant underreporting of COVID-19 cases and deaths in South Sudan. With only 4.6% of the population fully vaccinated against COVID-19, South Sudan remains at elevated risk of further surges in cases, especially in view of the potential emergence of new variants.

Following the successful installation of the country's first oxygen plant near Juba Teaching Hospital, South Sudan has begun producing oxygen in September 2021. The oxygen plant also included 240 cylinders with the aim of making it a centralized production facility and a supply

hub for the state hospitals. The production of oxygen has started to benefit Juba teaching hospital and the distribution of oxygen cylinders to major state hospitals is commencing soon. In order that South Sudan derives the full benefit of strengthened oxygen treatment capacity, additional oxygen plant is being procured by UNDP through the Global Fund's COVID-19 Response mechanism funding. The existing oxygen plant was put up physically between behind Juba Teaching Hospital and direct physical piping the plant with the Hospital is not feasible considering the distance between the oxygen plant and the hospital.

2. Purpose

Following the successful installation of the country's first oxygen plant near Juba Teaching Hospital, South Sudan has begun producing oxygen in September 2021. The oxygen plant also included 240 cylinders with the aim of making it a centralized production facility and a supply hub for the state hospitals. The production of oxygen has started to benefit Juba teaching hospital and the distribution of oxygen cylinders to major state hospitals is commencing soon. In order that South Sudan derives the full benefit of strengthened oxygen treatment capacity, additional oxygen plant is being procured by UNDP through the Global Fund's COVID-19 Response mechanism funding. The existing oxygen plant was put up physically between behind Juba Teaching Hospital and direct physical piping the plant with the Hospital is not feasible considering the distance between the oxygen plant and the hospital. Therefore, the purpose of the call for proposal is to determine the most feasible and cost-effective way of delivery of oxygen using distribution wall points installed at individual hospital units/buildings and provide piping system to the beds.

The project for Medical Oxygen/Air Piping Design and Installation Services in Juba Teaching Hospital, South Sudan. The project entails medical oxygen/air piping system assessment, design of piping system and financial proposal to meet the requirements of this TOR. Therefore, the purpose of this TOR is to select a competent company to conduct a detailed assessment of Medical Oxygen/Air gas piping needed, develop both technical and financial proposal for the piping system installation to service various departments (out-patient/emergency, intensive care units, selected wards, Obstetrics & Gynaecological Departments in Juba Teaching Hospital).

- 2.2. Medical gas grade copper pipes and dimensions with all accessories.
 - 2.3. Medical oxygen/medical air alarm system including zonal valves to isolate section of the hospital for ease of repair, maintenance, and inspection purposes.
 - 2.4. Hoses, pigtails, and connectors.
 - 2.5. Properly labelling of Medical Oxygen/air sources, piping and accessories to ascertain the elimination of cross connection (in reference to Global and National Standards identified in the field visit).
